

Factsheet

April 2026

SAMCO
MUTUAL FUND

*Cutting-edge Systems
For Wealth Creation*

How to Read Factsheet

Fund Manager: An employee of the asset management company such as a mutual fund or life insurer, who manages investments of the scheme. He/She is usually part of a larger team of fund managers and research analysts.

Application Amount for Fresh Subscription: This is the minimum investment amount for a new investor in a mutual fund scheme.

Minimum Additional Amount: This is the minimum investment amount for an existing investor in a mutual fund scheme.

SIP: Systematic Investment Plan (SIP) works on the principle of making periodic investments of a fixed sum. It works similar to a recurring bank deposit. For instance, an investor may opt for a SIP that invests ₹500 on every 15th of a month in an equity fund for a period of three years.

NAV: The NAV or the net asset value is the total asset value per unit of the mutual fund after deducting all related and permissible expenses. The NAV is calculated at the end of every business day. It is the value at which an investor enters or exits the mutual fund.

Benchmark: A group of securities, usually a market index, whose performance is used as a standard or benchmark to measure investment performance of mutual funds. Some typical benchmarks include the NIFTY, Sensex, BSE200, NSE500, Crisil Liquid Fund Index and 10-Year Gsec.

Entry Load: A mutual fund may have a sales charge or load at the time of entry and/or exit to compensate the distributor/agent. Entry load is charged when an investor purchases the units of a mutual fund. The entry load is added to the prevailing NAV at the time of investment. For instance, if the NAV is ₹100 and the entry load is 1%, the investor will enter the fund at ₹101.

Note: As per Clause 11.7 of SEBI Master circular NoHO/24/13/11(1)2026-IMD-POD-1/1/7602/2026 dated March 20, 2026 no entry load shall be charged.

Exit Load: Exit load is charged when an investor redeems the units of a mutual fund. The exit load is reduced from the prevailing NAV at the time of redemption. The investor will receive redemption proceeds at net value of NAV less Exit Load. For instance, if the NAV is ₹100 and the exit load is 1%, the investor will receive ₹99 per unit.

Modified Duration: Modified duration is the price sensitivity and the percentage change in price for a unit change in yield.

Average Maturity: Average Maturity: The average time of maturity of all the debt securities held in a portfolio. It states the weighted average maturity of the assets in the portfolio.

Yield to Maturity (YTM): The Yield to Maturity or the YTM is the rate of return anticipated on a bond is held until maturity. YTM is expressed as an annual rate. The YTM factors in the bond's current market price, par value, coupon interest rate and time to maturity.

Standard Deviation: Standard deviation is a statistical measure of the range of an investment's performance. When a mutual fund has a high standard deviation, it means its range of performance is wide, implying greater volatility.

Macaulay duration: The Macaulay duration is the weighted average term to maturity of the cash flows from a bond. The weight of each cash flow is determined by dividing the present value of the cash flow by the price

Sharpe Ratio: The Sharpe Ratio, named after its founder, the Nobel Laureate William Sharpe, is a measure of risk-adjusted returns. It is calculated using standard deviation and excess return to determine reward per unit of risk.

Beta Ratio (Portfolio Beta): Beta is a measure of an investment's volatility vis-a-vis the market. Beta of less than 1 means that the security will be less volatile than the market. A beta of greater than 1 implies that the security's price will be more volatile than the market.

AUM: AUM or assets under management refers to the recent/updated cumulative market value of investments managed by a mutual fund or any investment firm.

Holdings: The holdings or the portfolio is a mutual fund's latest or updated reported statement of investments/securities. These are usually displayed in terms of percentage to net assets or the rupee value or both. The objective is to give investors an idea of where their money is being invested by the fund manager.

Nature of Scheme: The investment objective and underlying investments determine the nature of the mutual fund scheme. For instance, a mutual fund that aims at generating capital appreciation by investing in stock markets is termed an equity fund or growth fund. Likewise, a mutual fund that aims at capital preservation by investing in debt markets is a debt fund or income fund. Each of these categories may have sub-categories.

Rating Profile: Mutual funds invest in securities after evaluating their creditworthiness as disclosed by the ratings. A depiction of the mutual fund in various investments based on their ratings becomes the rating profile of the fund. Typically, this is a feature of debt funds.

Total Expense Ratio: Total expenses charged to scheme for the month expressed as a percentage to average monthly net assets.

Portfolio Turnover Ratio: Portfolio Turnover Ratio is the percentage of a fund's holdings that have changed in a given year. This ratio measures the fund's trading activity, which is computed by taking the lesser of purchases or sales and dividing by average monthly net assets.

About Strategy

HexaShield Tested Investment

Samco's HexaShield Tested Investment is a strategy to put to work money with businesses that can endure and survive in a variety of stressful situations and generate superior long-term risk adjusted returns. It relies on understanding the resilience of companies based on Samco's HexaShield framework tests and evaluates every company and institution on 6 most important facets of risks and stress. These tests are meant to measure every company's ability to maintain enough buffer to stay afloat under adverse economic scenarios. The HexaShield tests are also designed to understand if these companies can generate high cash returns on capital employed in a variety of economic conditions including degrowth, recession, etc. This rigorous scientific and statistical process helps get an understanding of risks, reduces room for bias and beliefs, inculcates discipline and enhances the probability of success.

3E Investment Strategy

1. Buy only Efficient HexaShield Tested Companies
2. Buy at an Efficient Price
3. Maintain an Efficient Turnover

Active Momentum Strategy

Momentum refers to the tendency of winning stocks to continue to perform well and losing stocks to perform poorly in the near future. In Samco Active Momentum Fund the stocks are also selected based on their performance in the past with the idea that they will continue to outperform. The investors are attracted to a company whose price is on an upward trajectory thus opening a new way of buying at high and selling at higher, instead of the traditional idea of buying at low and selling at high, generating higher returns. A mix of methodologies to compute momentum are used which include but are not limited to Risk-adjusted Price Momentum, Momentum Strength Score & Momentum ratio. The fund makes trades based on trading signals generated by the intelligent algorithm. This algorithm has been developed by studying years of market data including price, volume, volatility, open interest, breakouts, relative strengths and correlations with appropriate weights on various data points.

Transformer Strategy

The principal asset allocation of Samco Dynamic Asset Allocation Fund shall be determined based on momentum in equity markets and extreme mean reversion signals which shall be calculated using SAMCO's proprietary TRANSFORMER model. Fundamentally the strategy will operate based on trend following strategies i.e., when markets are in clear uptrends with lower volatility, equity allocations shall be higher and when markets are breaking down, in correction or bear market phases, net equity allocations shall be zero or at extremely low levels. Only in extremely panic or euphoric conditions, the scheme will move to mean reversion models and build equity exposure in bear markets or cut equity exposure in bull markets. Rebalancing based on the model shall happen on real time dynamic basis and will not follow a monthly/quarterly rebalancing model.

Disruption Strategy

The SAMCO Special Opportunities Fund focuses on generating long-term capital growth by investing in companies experiencing or poised for special situations. These include circumstances like technological disruption, regulatory changes, management restructuring, or prolonged cyclical challenges. The fund targets companies that are either disruptors, enablers, or adaptors of change, as well as those with significant turnaround potential. It leverages inefficiencies in financial markets where the impact of such special situations may be undervalued or overlooked, aiming to capitalize on the resulting mispricing or unanticipated growth potential. The fund's strategy encompasses a broad spectrum, including digitization, insider mirror trading, spin-offs, reforms, undervalued holding companies, premiumization, sustainable trends, innovation, organized shifts, and new or emerging sectors. This diversified approach seeks to exploit a range of growth opportunities across different sectors and market conditions.

Tactical Allocation Strategy

To achieve the investment objective, SAMCO Multi Cap Fund follow active investment strategy which employs a unique and balanced investment strategy designed to optimize returns across various market segments. The strategy is built around pre-dominantly allocating 25% each to large caps, mid-caps, small caps, and floating exposure to small caps/foreign securities/debt, ensuring diversified exposure to different market capitalizations. In scenarios such as a bear market, the fund may exercise tactical deviations from its equal weight strategy to safeguard investor capital and optimize returns.

Rotate Model Strategy

The principal asset allocation of Samco Multi Asset Allocation Fund shall be determined based on trends in equity markets and trends in prices of Gold, Silver based on SAMCO's proprietary ROTATE model. Trends in equity, commodity markets and extreme mean reversion signals which shall be calculated using SAMCO's proprietary ROTATE model. Fundamentally the scheme will operate based on trend following strategies i.e., when markets are in clear uptrends with lower volatility, equity allocations shall be higher and when markets are breaking down, in correction or bear market phases, net equity allocations shall be zero using hedging strategies or at extremely low levels. In such cases, if Gold, Silver as an asset is up trending and exhibiting inverse co-relation to equities, then in such cases, the Fund shall have pre-dominantly higher exposure to Gold, Silver which could go up to 80% of net assets. In cases when both Gold, Silver and Equities are trending down and exhibiting weakness, the Fund will have pre-dominantly higher exposure to debt. Rebalancing based on the model shall happen on real time dynamic basis and will not follow a monthly/quarterly rebalancing model.

C.A.R.E. momentum strategy

SAMCO Large Cap Fund, SAMCO Large & Mid Cap Fund, SAMCO Small Cap Fund, Samco Mid Cap Fund are built on a cutting-edge momentum-based investment strategy that seeks to harness the power of market trends and corporate performance metrics. At its core, the fund employs SAMCO's proprietary C.A.R.E. momentum system to with an aim to deliver superior risk-adjusted returns by systematically identifying and allocating capital to stocks with strong momentum indicators. The C.A.R.E. system integrates four key dimensions of momentum-Cross Sectional Momentum, Absolute Momentum, Revenue Momentum, and Earnings Momentum. These parameters ensure that the portfolio remains optimized by focusing on stocks that exhibit robust momentum traits. The use of derivatives and hedging further strengthens the strategy by mitigating risks during periods of market volatility.

From the CIO's desk

The past month witnessed the continuation of tensions in West Asia, with their impact being felt across energy markets and keeping the broader macro environment cautious despite attempted signs of de-escalation. While the earlier shock around critical energy corridors led to a sharp spike in crude prices, April witnessed efforts at de-escalation. Oil markets remained highly sensitive to developments around key shipping routes, with prices staying elevated despite some moderation from peak levels. The lingering risk premium continues to reflect concerns around supply security, freight costs, and geopolitical unpredictability. As a result, the global macro environment remains delicately balanced.

Policymakers remain watchful of the developments in West Asia while prioritizing national security and strategic interests. Market behavior through April has reflected the evolving circumstances of the war. While the sharp risk-off sentiment seen earlier has somewhat eased, volatility remains elevated. Equity markets have attempted partial recoveries but lack clear directional conviction. Investors are differentiating between businesses based on balance sheet strength, earnings visibility, and resilience to input cost pressures. In such an environment, broad-based rallies remain limited but selective opportunities continue to emerge as markets recalibrate expectations.

Within the Indian context, the interplay between global headwinds and domestic resilience are clearly visible. Elevated crude prices could exert pressure on the macros, particularly through input costs, inflation expectations and external balances. However, April also highlighted the relative strength of India's internal growth drivers. Government-led capital expenditure, infrastructure momentum and steady consumption have helped cushion the impact of external shocks.

Retail investor resilience remains a defining feature of the current market environment. Systematic Investment Plan (SIP) flows have continued to scale new highs with inflows at ~INR 32,000 crores, reflecting sustained participation despite elevated volatility and external uncertainties. This steady inflow underscores growing financialization of savings and a long-term orientation among investors. The strength of the SIP book helps to provide a stable counterbalance to intermittent foreign outflows, supporting overall market stability.

A notable continuation from the previous month has been the strong policy thrust toward defence and indigenisation. The government's sustained focus on domestic manufacturing, faster execution of procurement pipelines, and strategic prioritization of self-reliance is translating into opportunities for the sector. Order visibility for domestic players remains robust, supported by structural policy backing rather than cyclical factors. This reinforces the broader theme that periods of geopolitical uncertainty often accelerate domestic capacity building in critical sectors.

Importantly, the current phase still appears cyclical rather than structural. While global uncertainties have introduced near-term headwinds, the core drivers of India's growth story remain intact. Balance sheet strength across corporates, improving capacity utilization, and sustained public investment provide a foundation for medium-term stability. The moderation seen in certain indicators is more reflective of cost-side pressures than any meaningful deterioration in demand.

In this environment, our investment approach remains consistent with a long-term, bottom-up philosophy focused on quality and resilience. We continue to prioritize companies with strong balance sheets, pricing power, and the ability to sustain margins in a volatile cost environment. Portfolio positioning remains diversified, with selective exposure to sectors benefiting from structural tailwinds such as defence, infrastructure, and domestic consumption. Active risk management and liquidity discipline remain central to navigating near-term uncertainties while staying aligned with long-term wealth creation objectives.

As markets transition from shock to adjustment, volatility is likely to persist. However, such phases continue to create opportunities to accumulate high-quality businesses at more reasonable valuations, reinforcing the importance of staying disciplined and forward-looking in an evolving macro landscape.

The reader should not assume that investment in the sector/stocks/securities mentioned was or will be profitable

Samco Active Momentum Fund

(An open-ended equity scheme following momentum theme)

Investment Objective

The investment objective of the Scheme is to seek to generate long-term capital appreciation by investing in stocks showing strong momentum. Momentum stocks are such that exhibit positive price momentum – based on the phenomenon that stocks which have performed well in the past relative to other stocks (winners) continue to perform well in the future, and stocks that have performed relatively poorly (losers) continue to perform poorly.

However, there can be no assurance or guarantee that the investment objective of the scheme would be achieved.

Scheme Details

Inception Date (Date of Allotment)	: 5 th July 2023
Benchmark	: Nifty 500 TRI

Disclosure on Active Share

The Active Share was first introduced by Martijn Cremers and Antti Petajisto, both Yale School of Management professors whose concepts were first published in the Review of Financial Studies 2009 paper titled "How active is your Fund Manager"- A New Measure That Predicts Performance.

Active Share measures the fraction of a portfolio (based on position weights) that differs from the benchmark index. The only way that the equity fund manager can outperform a given benchmark is by taking positions that differ from those in the benchmark. Active Share will always fall between 0% and 100%, where 0% will indicate a truly passive index fund and a higher percentage closer to 100% will show true active management with portfolio stocks diverging from the benchmark.

Disclaimer :

We are voluntarily disclosing the Active Share of Samco Active Momentum Fund in the interest of maintaining high transparency to the investors.

Please refer to our website www.samcomf.com/active-share/samco-active-momentum-fund to view how to calculate active share.

The information on Active Share should not be construed as a forecast or promise of returns or safeguard of capital. The Investors who must make their own investment decisions, based on their own investment objectives, financial positions and needs of specific investor.

Industry Allocation of Net Equity Holding (% of Net Assets)

Disclosure on Active Share

The Active Share was first introduced by Martijn Cremers and Antti Petajisto, both Yale School of Management professors whose concepts were first published in the Review of Financial Studies 2009 paper titled "How active is your Fund Manager"- A New Measure That Predicts Performance.

Active Share measures the fraction of a portfolio (based on position weights) that differs from the benchmark index. The only way that the equity fund manager can outperform a given benchmark is by taking positions that differ from those in the benchmark. Active Share will always fall between 0% and 100%, where 0% will indicate a truly passive index fund and a higher percentage closer to 100% will show true active management with portfolio stocks diverging from the benchmark.

Disclaimer :

We are voluntarily disclosing the Active Share of Samco Multi Asset Allocation Fund in the interest of maintaining high transparency to the investors.

Please refer to our website www.samcomf.com/active-share/samco-multi-asset-allocation-fund to view how to calculate active share.

The information on Active Share should not be construed as a forecast or promise of returns or safeguard of capital. The Investors who must make their own investment decisions, based on their own investment objectives, financial positions and needs of specific investor.

(An open ended dynamic asset allocation fund)

Investment Objective

The investment objective of the Scheme is to generate income/long-term capital appreciation by investing in equity, equity derivatives, fixed income instruments and foreign securities. The allocation between equity instruments and fixed income will be managed dynamically so as to provide investors with long term capital appreciation while managing downside risk.

However, there can be no assurance or guarantee that the investment objective of the scheme would be achieved

Industry Allocation of Net Equity Holding (% of Net Assets)

Disclosure on Active Share

The Active Share was first introduced by Martijn Cremers and Antti Petajisto, both Yale School of Management professors whose concepts were first published in the Review of Financial Studies 2009 paper titled "How active is your Fund Manager"- A New Measure That Predicts Performance.

Active Share measures the fraction of a portfolio (based on position weights) that differs from the benchmark index. The only way that the equity fund manager can outperform a given benchmark is by taking positions that differ from those in the benchmark. Active Share will always fall between 0% and 100%, where 0% will indicate a truly passive index fund and a higher percentage closer to 100% will show true active management with portfolio stocks diverging from the benchmark.

Disclaimer :

We are voluntarily disclosing the Active Share of Samco Dynamic Asset Allocation Fund in the interest of maintaining high transparency to the investors.

Please refer to our website www.samcomf.com/active-share/samco-dynamic-asset-allocation-fund to view how to calculate active share.

The information on Active Share should not be construed as a forecast or promise of returns or safeguard of capital. The Investors who must make their own investment decisions, based on their own investment objectives, financial positions and needs of specific investor.

<p>This product is suitable for investors who are seeking * :</p> <ul style="list-style-type: none"> • Capital Appreciation & Income Generation over medium to long term • Investment in a dynamically managed portfolio of equity & equity related instruments and debt & money market securities 	<div style="display: flex; justify-content: space-around;"> <div style="text-align: center;"> <p>Scheme Risk-o-meter</p> <p>RISK-O-METER</p> <p>The risk of the scheme is low to moderate</p> </div> <div style="text-align: center;"> <p>Benchmark Risk-o-meter</p> <p>RISK-O-METER</p> <p>The risk of the benchmark (NIFTY 50 Hybrid Composite Debt 50:50 Index) is high</p> </div> </div>

Mutual Fund investments are subject to market risks, read all scheme related documents carefully.

Samco Special Opportunities Fund

(An open-ended equity scheme following special situations theme)

Investment Objective

The investment objective of the scheme is to achieve long-term capital appreciation by investing in a portfolio of securities that are involved in special situations such as restructurings, turnarounds, spin-offs, mergers & acquisitions, new trends, new & emerging sectors, digitization, premiumization, and other special corporate actions. These situations often create mispricings and undervalued opportunities that the fund aims to exploit for potential capital appreciation.

However, there can be no assurance or guarantee that the investment objective of the scheme would be achieved.

Disclosure on Active Share

The Active Share was first introduced by Martijn Cremers and Antti Petajisto, both Yale School of Management professors whose concepts were first published in the Review of Financial Studies 2009 paper titled "How active is your Fund Manager"- A New Measure That Predicts Performance.

Active Share measures the fraction of a portfolio (based on position weights) that differs from the benchmark index. The only way that the equity fund manager can outperform a given benchmark is by taking positions that differ from those in the benchmark. Active Share will always fall between 0% and 100%, where 0% will indicate a truly passive index fund and a higher percentage closer to 100% will show true active management with portfolio stocks diverging from the benchmark.

Disclaimer :

We are voluntarily disclosing the Active Share of Samco Small Cap Fund in the interest of maintaining high transparency to the investors. Please refer to our website www.samcomf.com/active-share/samco-small-cap-fund to view how to calculate active share.

The information on Active Share should not be construed as a forecast or promise of returns or safeguard of capital. The Investors who must make their own investment decisions, based on their own investment objectives, financial positions and needs of specific investor.

Active Share measures the fraction of a portfolio (based on position weights) that differs from the benchmark index. The only way that the equity fund manager can outperform a given benchmark is by taking positions that differ from those in the benchmark. Active Share will always fall between 0% and 100%, where 0% will indicate a truly passive index fund and a higher percentage closer to 100% will show true active management with portfolio stocks diverging from the benchmark.

Benchmark: CRISIL Overnight Fund AI Index **Additional Benchmark:** CRISIL 1 Year T-Bill Index **Inception/Allotment date:** 12th October 2022

Past performance may or may not be sustained in the future and is not a guarantee of any future returns. Returns computed on compounded annualised basis based on the NAV. Different Plans i.e. Regular Plan and Direct Plan under the scheme has different expense structure. The "since inception" returns of the scheme are calculated on Rs. 10/- invested at inception. The Fund is co-managed by Mr. Umeshkumar Mehta (since April 03, 2024), Mrs. Nirali Bhansali (since February 19, 2025), Mr. Dhawal Ghanshyam Dhanani (since inception) and Ms. Komal Grover (since July 17, 2025). In case, the start / end date of the concerned period is a non-business date (NBD), the NAV of the previous date is considered for computation of returns.
