

Factsheet

June 2024

SAMCO
MUTUAL FUND

How to Read Factsheet

Fund Manager: An employee of the asset management company such as a mutual fund or life insurer, who manages investments of the scheme. He/She is usually part of a larger team of fund managers and research analysts.

Application Amount for Fresh Subscription: This is the minimum investment amount for a new investor in a mutual fund scheme.

Minimum Additional Amount: This is the minimum investment amount for an existing investor in a mutual fund scheme.

SIP: Systematic Investment Plan (SIP) works on the principle of making periodic investments of a fixed sum. It works similar to a recurring bank deposit. For instance, an investor may opt for a SIP that invests ₹500 on every 15th of a month in an equity fund for a period of three years.

NAV: The NAV or the net asset value is the total asset value per unit of the mutual fund after deducting all related and permissible expenses. The NAV is calculated at the end of every business day. It is the value at which an investor enters or exits the mutual fund.

Benchmark: A group of securities, usually a market index, whose performance is used as a standard or benchmark to measure investment performance of mutual funds. Some typical benchmarks include the NIFTY, Sensex, BSE200, NSE500, Crisil Liquid Fund Index and 10-Year Gsec.

Entry Load: A mutual fund may have a sales charge or load at the time of entry and/or exit to compensate the distributor/agent. Entry load is charged when an investor purchases the units of a mutual fund. The entry load is added to the prevailing NAV at the time of investment. For instance, if the NAV is ₹100 and the entry load is 1%, the investor will enter the fund at ₹101.

Note: SEBI, vide circular dated June 30, 2009 has abolished entry load and mandated that the upfront commission to distributors will be paid by the investor directly to the distributor, based on his assessment of various factors including the service rendered by the distributor.

Exit Load: Exit load is charged when an investor redeems the units of a mutual fund. The exit load is reduced from the prevailing NAV at the time of redemption. The investor will receive redemption proceeds at net value of NAV less Exit Load. For instance, if the NAV is ₹100 and the exit load is 1%, the investor will receive ₹99 per unit.

Modified Duration: Modified duration is the price sensitivity and the percentage change in price for a unit change in yield.

Average Maturity: The average time of maturity of all the debt securities held in a portfolio. It states the weighted average maturity of the assets in the portfolio.

Yield to Maturity (YTM): The Yield to Maturity or the YTM is the rate of return anticipated on a bond is held until maturity. YTM is expressed as an annual rate. The YTM factors in the bond's current market price, par value, coupon interest rate and time to maturity.

Standard Deviation: Standard deviation is a statistical measure of the range of an investment's performance. When a mutual fund has a high standard deviation, it means its range of performance is wide, implying greater volatility.

Macaulay duration: The Macaulay duration is the weighted average term to maturity of the cash flows from a bond. The weight of each cash flow is determined by dividing the present value of the cash flow by the price

Sharpe Ratio: The Sharpe Ratio, named after its founder, the Nobel Laureate William Sharpe, is a measure of risk-adjusted returns. It is calculated using standard deviation and excess return to determine reward per unit of risk.

Beta Ratio (Portfolio Beta): Beta is a measure of an investment's volatility vis-a-vis the market. Beta of less than 1 means that the security will be less volatile than the market. A beta of greater than 1 implies that the security's price will be more volatile than the market.

AUM: AUM or assets under management refers to the recent/ updated cumulative market value of investments managed by a mutual fund or any investment firm.

Holdings: The holdings or the portfolio is a mutual fund's latest or updated reported statement of investments/securities. These are usually displayed in terms of percentage to net assets or the rupee value or both. The objective is to give investors an idea of where their money is being invested by the fund manager.

Nature of Scheme: The investment objective and underlying investments determine the nature of the mutual fund scheme. For instance, a mutual fund that aims at generating capital appreciation by investing in stock markets is termed an equity fund or growth fund. Likewise, a mutual fund that aims at capital preservation by investing in debt markets is a debt fund or income fund. Each of these categories may have sub-categories.

Rating Profile: Mutual funds invest in securities after evaluating their creditworthiness as disclosed by the ratings. A depiction of the mutual fund in various investments based on their ratings becomes the rating profile of the fund. Typically, this is a feature of debt funds.

Total Expense Ratio: Total expenses charged to scheme for the month expressed as a percentage to average monthly net assets.

Portfolio Turnover Ratio: Portfolio Turnover Ratio is the percentage of a fund's holdings that have changed in a given year. This ratio measures the fund's trading activity, which is computed by taking the lesser of purchases or sales and dividing by average monthly net assets.

About Strategy

HEXASHIELD TESTED INVESTMENTS

Buy and hold

HexaShield Tested Investments is a strategy to put to work money with businesses that can endure and survive in a variety of stressful situations and generate superior long-term risk adjusted returns. It relies on understanding the resilience of companies based on Samco's HexaShield framework tests and evaluates every company and institution on 6 most important facets of risks and stress. These tests are meant to measure every company's ability to maintain enough buffer to stay afloat under adverse economic scenarios. The HexaShield tests are also designed to understand if these companies can generate high cash returns on capital employed in a variety of economic conditions including degrowth, recession, etc. This rigorous scientific and statistical process helps get an understanding of risks, reduces room for bias and beliefs, inculcates discipline and enhances the probability of success.

3E Investment Strategy

1. Buy only **Efficient HexaShield Tested Companies**
2. Buy at an **Efficient Price**
3. Maintain an **Efficient Turnover**

DISTINCTIVE PATTERN STRATEGY

Momentum

Momentum refers to the tendency of winning stocks to continue to perform well and losing stocks to perform poorly in the near future. In Momentum strategy the stocks are also selected based on their performance in the past with the idea that they will continue to outperform. The investors are attracted to a company whose price is on an upward trajectory thus opening a new way of buying at high and selling at higher, instead of the traditional idea of buying at low and selling at high, generating higher returns. Momentum strategies exploit this continuation in return patterns in order to make a profit.

Stocks in Momentum could be selected via Time Series Momentum or Cross-sectional Momentum. Time-series momentum and Cross-sectional momentum are two distinct measures used to evaluate the performance of stocks. Time-series momentum, also known as absolute momentum, assesses a stock's past performance by considering its own returns independently from the returns of other stocks. On the other hand, cross-sectional momentum, previously known as relative strength, measures a stock's performance in comparison to other stocks. A mix of methodologies to compute momentum are used which include but are not limited to Risk-adjusted Price Momentum, Momentum Strength Score & Momentum ratio.

The fund makes trades based on trading signals generated by the intelligent algorithm. This algorithm has been developed by studying years of market data including price, volume, volatility, open interest, breakouts, relative strengths and correlations with appropriate weights on various data points. The Momentum investing is based on that gap in time that exists before mean reversion occurs. Momentum is usually seen in the short- to intermediate-term.

Each stock shall be assigned a momentum score based on SAMCO's proprietary model that is based on variety of factors including price momentum, breakouts and for additional inputs, fundamental qualities such size, value and quality are also taken into consideration. The selection of stocks and their weightage is based on the momentum score, free float market cap and other factors.

Samco Flexi Cap Fund

(An open-ended dynamic equity scheme investing across large cap, mid cap, small cap stocks)

Investment Objective

The investment objective of the Scheme is to seek to generate long-term capital growth from an actively managed portfolio of Indian & foreign equity instruments across market capitalisation. However, there is no assurance or guarantee that the investment objective of the Scheme will be achieved.

Samco Flexi Cap Fund

(An open-ended dynamic equity scheme investing across large cap, mid cap, small cap stocks)

Portfolio Comment for June 2024

We have deployed 99.20% of our AUM, maintaining an asset allocation of 99% in Indian Equities, and 0.80% in TREPS, Cash, Cash Equivalents, and Net Current Assets as of June 30, 2024.

This month, we have added a couple of new stocks to our portfolio. These businesses are fundamentally strong with significant growth potential, driven by the substantial tailwinds in their respective sectors. We believe the fund will capitalize on their upward trajectory. Our portfolio continues to maintain diverse exposure across various industries, with increased weightages in Capital Markets, Industrial Products, Aerospace and Defense, and Automobiles.

There has been a strategic shift in our approach: we have completely exited our exposure to foreign equities. Previously, this was a sub-10% weightage, with minimal impact on the portfolio's performance. Due to an industry-wide restriction by the RBI on investing fresh funds in foreign equities, we were unable to increase our exposure to 35%. Therefore, we decided to book profits from our foreign holdings and reallocate these funds into Indian equities. Should this restriction be lifted in the future, we will reassess the possibility of a 65%-35% India-global exposure based on the then-prevailing macro and microeconomic conditions.

Despite these strategic and tactical adjustments, our approach remains steadfast in focusing on businesses with high-quality, superior earnings growth potential, high ROCE, and other key fundamentals, valuations, and macroeconomic variables. Moving forward, we will stay vigilant about the risks to our portfolio, always prioritizing the best interests of our unitholders.

Disclosure on Active Share

The Active Share was first introduced by Martijn Cremers and Antti Petajisto, both Yale School of Management professors whose concepts were first published in the Review of Financial Studies 2009 paper titled "How active is your Fund Manager"- A New Measure That Predicts Performance.

Active Share measures the fraction of a portfolio (based on position weights) that differs from the benchmark index. The only way that the equity fund manager can outperform a given benchmark is by taking positions that differ from those in the benchmark. Active Share will always fall between 0% and 100%, where 0% will indicate a truly passive index fund and a higher percentage closer to 100% will show true active management with portfolio stocks diverging from the benchmark.

Disclaimer :

Samco ELSS Tax Saver Fund

(An open-ended Equity Linked Saving Scheme with a statutory lock-in of 3 years and tax benefit.)

Portfolio Comment for June 2024

We have deployed 96.93% of our AUM in Indian Equities and 3.07% in TREPS, Cash, Cash Equivalents and Net Current Asset as of June 30, 2024.

In June, mid and small-cap stocks experienced a strong rally, even amidst some volatile days in Indian and global macroeconomic conditions. This has positively impacted our portfolio, which predominantly invests in mid and small-cap businesses. A common trait among our portfolio constituents is their high quality, despite their smaller size. With robust fundamentals and optimal valuations, we believe this fund is well-positioned to capitalize on the mid and small-cap wave moving forward.

However, we are mindful of the inherent risks associated with smaller businesses. Consequently, we have strategically exited several stocks where valuations have surged and the potential for medium-term earnings growth appears limited. We have instead reinvested in businesses that we believe have potential for rerating or improvement in earnings and fundamentals. Overall, the fund allows us to continue being a part of India's growth story.

Disclosure on Active Share

The Active Share was first introduced by Martijn Cremers and Antti Petajisto, both Yale School of Management professors whose concepts were first published in the Review of Financial Studies 2009 paper titled "How active is your Fund Manager"- A New Measure That Predicts Performance.

Samco Active Momentum Fund

(An open-ended equity scheme following momentum theme)

Investment Objective

The investment objective of the Scheme is to seek to generate long-term capital appreciation by investing in stocks showing strong momentum. Momentum stocks are such that exhibit positive price momentum – based on the phenomenon that stocks which have performed well in the past relative to other stocks (winners) continue to perform well in the future, and stocks that have performed relatively poorly (losers) continue to perform poorly. However, there can be no assurance or guarantee that the investment objective of the scheme would be achieved.

Samco Active Momentum Fund

(An open-ended equity scheme following momentum theme)

Portfolio Comment for June 2024

The month of June 2024 saw heightened market volatility, characterized by wild swings in the beginning of the month. The unexpected outcome of the Lok Sabha elections resulted in a knee-jerk reaction across all market segments, leading to a sharp fall. However, as the emergence of a coalition government and policy continuation became evident, the markets swiftly recovered, registering fresh lifetime highs.

In alignment with our DISTINCTIVE PATTERNS strategy, the Samco Active Momentum Fund adeptly positioned itself in market segments exhibiting strength. The current market resilience is bolstered by robust domestic inflows and a buoyant Indian economy. The current coalition government structure could create a fresh set of market leaders, and our fund is strategically poised to capitalize on these opportunities. We maintain our focus on sectors and stocks that show significant momentum, ensuring the portfolio remains agile and responsive to market changes. Our momentum investing strategy capitalizes on the continuation of strong performance trends which positions the fund to enhance the risk-adjusted returns for the unitholders. As the markets evolve, our approach will remain dynamic, with a continued emphasis on monitoring and adjusting the portfolio to navigate risks effectively.

As of June 30, 2024, we have deployed 94.61% of net assets in Indian Equities, with the remaining 5.39% allocated to TREPS, Cash, Cash Equivalents, and Net Current Assets.

Disclosure on Active Share

The Active Share was first introduced by Martijn Cremers and Antti Petajisto, both Yale School of Management professors whose concepts were first published in the Review of Financial Studies 2009 paper titled "How active is your Fund Manager"- A New Measure That Predicts Performance.

Active Share measures the fraction of a portfolio (based on position weights) that differs from the benchmark index. The only way that the equity fund manager can outperform a given benchmark is by taking positions that differ from those in the benchmark. Samco Special Opportunities Fund

(An open-ended equity scheme following special situations theme)

Investment Objective

The investment objective of the scheme is to achieve long-term capital appreciation by investing in a portfolio of securities that are involved in special situations such as restructurings, turnarounds, spin-offs, mergers & acquisitions, new trends, new & emerging sectors, digitization, premiumization, and other special corporate actions. These situations often create mispricings and undervalued opportunities that the fund aims to exploit for potential capital appreciation. However, there can be no assurance or guarantee that the investment objective of the scheme would be achieved.

Samco Special Opportunities Fund

(An open-ended equity scheme following special situations theme)

Portfolio Comment for June 2024

Team Samco Mutual Fund is grateful to all the unitholders for the overwhelming response to the fund, which helped us garner ~ INR 176 crores during the NFO period.

The Indian equity markets have relatively matured on an absolute basis over the last few years, backed by robust economic performance and increasing domestic participation. These factors have also led to participation from companies seeking to raise capital through different routes to fuel a new leg of growth. Moreover, the government's favourable policy outlook for various industries has spurred a revival of different sectors, creating significant wealth for investors. These conditions are providing a plethora of opportunities for the future. As the structure of the Indian economy shifts from an agrarian and service-led economy to an equally strong manufacturing powerhouse, we believe that the Indian equity markets are poised to benefit from the emergence of new industries and the revival of past winners.

Accordingly, the fund has significantly completed the portfolio construction phase. We remain committed to capturing the special opportunities emerging in the Indian equity market, backed by our DISRUPTION model. Our intent is to capitalize on a diverse set of opportunities and allocate capital accordingly to enhance risk-adjusted returns for our unitholders. We are dedicated to identifying and investing in companies that are well-positioned to benefit from the evolving economic landscape. By leveraging our DISRUPTION model, we aim to dynamically adjust our portfolio to align with market trends and maximize returns while effectively managing risks. We are excited about the potential opportunities ahead and remain committed to delivering long-term value to our investors.

As of June 30, 2024, we have deployed 94.50% of net assets in Indian Equities, with the remaining 5.50% allocated to TREPS, Cash, Cash Equivalents, and Net Current Assets.

Disclosure on Active Share

The Active Share was first introduced by Martijn Cremers and Antti Petajisto, both Yale School of Management professors whose concepts were first published in the Review of Financial Studies 2009 paper titled "How active is your Fund Manager"- A New Measure That Predicts Performance.

Active Share measures the fraction of a portfolio (based on position weights) that differs from the benchmark index. The only way that the equity fund manager can outperform a given benchmark is by taking positions that differ from those in the benchmark. Active Share will always fall between 0% and 100%, where 0% will indicate a truly passive index fund and a higher percentage closer to 100% will show true active management with portfolio stocks diverging from the benchmark.

*The calculation of active share henceforth will be on free float market capitalization, a change from full market capitalization.

Disc a me :

We are voluntarily disclosing the Active Share of Samco Special Opportunities Fund in the interest of maintaining high transparency to the investors. Please refer to our website www.samcomf.com/active-share/samco-special-opportunities-fund to view how to calculate active share. Samco Dynamic Asset Allocation Fund

(An open-ended dynamic asset allocation fund)

Investment Objective

The investment objective of the Scheme is to generate income/long-term capital appreciation by investing in equity, equity derivatives, fixed income instruments and foreign securities. The allocation between equity instruments and fixed income will be managed dynamically so as to provide investors with long term capital appreciation while managing downside risk. However, there can be no assurance or guarantee that the investment objective of the scheme would be achieved.

Samco Dynamic Asset Allocation Fund

(An open-ended dynamic asset allocation fund)

Portfolio Comment for June 2024

During the month of June 2024, the market exhibited severe volatility due to the outcome of the Lok Sabha elections and the formation of the Central government. The beginning of the month was marked by a sharp down move in all the indices under the Nifty framework due to the below-expected election outcome. However, the formation of a stable government and policy continuation instilled renewed confidence in the market, leading to fresh lifetime highs across different market segments. The rise in the Nifty50 index was backed by heavyweights including Reliance Industries and Private Banks, which constitute a significant weightage in the index. The Nifty Midcap index and Nifty Smallcap 250 index witnessed an up move backed by a diverse set of industry segments experiencing strong participation.

True to its strategy, the Samco Dynamic Asset Allocation Fund navigated the market volatility by aligning the portfolio to market segments exhibiting sustained momentum. The agile DISRUPTION model allows the fund to traverse between equity and debt-heavy portfolio structures based on market dynamics, leading to better risk-adjusted returns. As the markets evolved, our DISRUPTION model enabled us to make significant portfolio adjustments. We increased our net equity exposure to capitalize on the upward momentum, while strategically managing our debt positions to mitigate risks. Our dynamic strategy aims to enhance the potential for returns while effectively navigating the evolving market landscape. The fund remains committed to leveraging its dynamic allocation strategy to maximize returns and maintain resilience amidst market fluctuations.

As of June 30, 2024, the fund has Net equities of 91.57%, fixed income instruments comprise of 5.95% and remaining balance of 2.48% is TREPS, Cash, Cash Equivalents, and Net Current Assets.

Disclosure on Active Share

The Active Share was first introduced by Martijn Cremers and Antti Petajisto, both Yale School of Management professors whose concepts were first published in the Review of Financial Studies 2009 paper titled “How active is your Fund Manager”- A New Measure That Predicts Performance.

Active Share measures the fraction of a portfolio (based on position weights) that differs from the benchmark index. The only way that the equity fund manager can outperform a given benchmark is by taking positions that differ from those in the benchmark. Active Share will always fall between 0% and 100%, where 0% will indicate a truly passive index fund and a higher percentage closer to 100% will show true active management with portfolio stocks diverging from the benchmark.

The calculation of active share for DAAF has been done for only the equity segment vis a vis Nifty 500
