## Investment Strategy

The AMC shall endeavor to invest in only the most efficient companies that pass rigorous tests under the HexaShield Framework. The AMC has built a proprietary in-house HexaShield framework to guide stock selection. The portfolios will be built utilizing a bottom-up stock

selection process, focusing on appreciation potential of individual stocks from a fundamental perspective. Within equities, the fund's strategy will endeavor to have a predominantly higher allocation to mid and small cap companies selected using the above stated process. The definition of Mid and small cap shall be the basis AMFI's classification of stocks. The scheme will invest in about 30-40 scripts to ensure adequate diversification and reduce risks. The AMC in selecting scrips, especially from the mid and small cap class, will focus on the fundamentals of the business, the industry structure, the quality of management, sensitivity to economic factors, the financial strength of the company and the key earnings drivers. The Fund will have the flexibility to invest across the market capitalization spectrum.

The Scheme may also invest a certain portion of its corpus in debt and money market securities. Investment in debt securities will be guided by credit quality, liquidity, interest rates and their outlook.

## SAMCO's proprietary E3 Strategy

SAMCO's E3 strategy is to Buy Efficient Companies at an Efficient Price and Maintain an Efficient Portfolio Turnover

## 1. Buy Efficient HexaShield tested Companies -

Samco's proprietary HexaShield framework is run on companies to examine whether they can survive in difficult times. Companies from across the world are passed through the HexaShield framework and the ones that clear, score highly, and are therefore termed efficient companies.

Being an efficient company doesn't mean it will be bought immediately. There is one more aspect that will be considered before buying a business, which is the second leg of the strategy.

#### 2. Buy them at an Efficient Price -

Companies that clear the HexaShield framework will be efficient companies which typically trade at premium valuations. These efficient companies will be bought at a justified premium not an exorbitant premium.

#### 3. Maintain an Efficient Portfolio Turnover -

A unitholder typically pays an applicable total expense ratio (TER) and Voluntary Dealing Costs (VDC) for the mutual fund. VDC consists of the brokerage fee that is incurred each time a fund manager buys and sells a stock, STT, GST and stamp duty. VDC excludes the costs incurred for involuntary transactions such as fund inflows or outflows. These costs aren't included in total expenses ratio and are straight away deducted from the net asset value (NAV) of the fund. Given that VDC is charged separately, it reduces and impacts the NAV to that extent. SAMCO Mutual Fund endeavours to keep the VDC as low as possible.

Samco's E3 strategy aims to help maximize returns for an investor in the long run by keeping costs as low as possible.

## SAMCO's proprietary HexaShield Investment framework

SAMCO's HexaShield framework is a strategy to put to work money with businesses that can endure and survive in a variety of stressful situations and generate superior long-term risk adjusted returns. It relies on understanding the resilience of companies based on SAMCO's HexaShield framework tests and evaluates every company and institution on 6 most important facets of risks and stress. These tests are meant to measure every company's ability to maintain enough buffer to stay afloat under adverse economic scenarios. The HexaShield tests are also designed to understand if these companies can generate high cash returns on capital employed in a variety of economic conditions including degrowth, recession, etc. This rigorous scientific and statistical process helps get an understanding of risks, reduces room for bias and beliefs, inculcates discipline and enhances the probability of success. Companies that pass the criteria often exhibit 2 characteristics - they survive as a going during economic distress and operate as true compounding machines in normal economic cycles.

The 6 facets of testing that are followed in our HexaShield framework are:

- 1. Competitive Strength and Pricing Power
- 2. Balance Sheet and Insolvency
- 3. Re-investment and Growth
- 4. Corporate Governance and Leadership
- 5. Cash Flow
- 6. Regulatory

The HexaShield tested framework puts businesses through simulated pressure scenarios to filter out the businesses that stand tall and emanate excellence despite any adversity. It observes that if companies pass the test on various fundamental factors and only the ones that cross the benchmark percentage hurdle in all 6 pillars will be eligible to be a part of the investment universe. The companies which fail to cross the benchmark level on even a single pillar will fail the test. Samco Mutual Fund endeavors to invest in only the most capital efficient companies. Samco's HexaShield tested framework defines and quantifies the definition of a high-quality business. The investable universe is restricted to a limited set of businesses that pass the criteria and construct a portfolio that scores highly under the HexaShield Framework.

#### **Trading in Derivatives:**

The Scheme may invest in various derivative instruments only if permitted under ELSS Rules. Derivatives will be used for the purpose of hedging, and portfolio balancing or such other purpose as may be permitted under the regulations and Guidelines from time to time. Such investments shall be subject to the investment objective and strategy of the Scheme and the internal limits if any, as laid down from time to time. These include but are not limited to futures (both stock and index) and options (stock and index).

The following section describes the concepts and examples of derivatives that may be used by the fund manager. The strategies and illustrations provided below are only for the purpose of understanding the concept and uses of derivative instruments.

**A) Futures** - Futures (Index & Stocks) are forward contracts traded on the exchanges & have been introduced both by BSE and NSE. Generally, futures of 1 month (near month), 2 months (next month) and 3 months (far month) are presently traded on these exchanges. These futures expire on the last working Thursday of the respective months. Some strategies are mentioned below:

- (i) **Arbitrage** The Scheme may use the strategy of i) selling spot and buying future or ii) Buying spot and selling future.
- (ii) **Buying/Selling stock futures** When the Scheme wants to initiate a long position in a stock whose spot price is at say, Rs.100 and futures is at 98, then the Scheme may just buy the futures contract instead of the spot thereby benefiting from a lower cost.
- (iii) **Hedging** The Scheme may use exchange-traded derivatives to hedge the equity portfolio. Both index and stock futures and options may be used to hedge the stocks in the portfolio.
- (iv) **Alpha Strategy** -The Scheme will seek to generate alpha by superior stock selection and removing market risks by selling appropriate index. For example, one can seek to generate positive alpha by buying a bank stock and selling Bank Nifty future.
- **B) Option Contracts (Stock and Index)** An Option gives the buyer the right, but not the obligation, to buy (call) or sell (put) a stock at an agreed-upon price during a certain period of time or on a specific date.
  - (i) Index options/Stock options Index options / Stock options are termed to be an efficient way of buying / selling an index/stock compared to buying / selling a portfolio of physical shares representing an index for ease of execution and settlement. Participation can be done by buying / selling either Index futures or by buying a call/put option.
  - (ii) **Covered Call Strategy** The covered call strategy is a strategy where a fund manager writes call options against an equivalent long position in an underlying stock thereby giving up a part of the upside from the long position.
- C) **Fixed Income Derivative instruments** The Scheme may use Derivative instruments like interest rate swaps like overnight indexed swaps (OIS), forward rate agreements, interest rate futures or such other Derivative instruments as may be permitted under the applicable regulations.

Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and the decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies. The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments.

Investors may refer to the SAI for details on the Derivative strategies along with illustrations for better understanding.

#### **Portfolio Turnover Policy**

The Scheme being an open-ended scheme, it is expected that there would be several subscriptions and redemptions on a daily basis. Consequently, it is difficult to estimate, with any reasonable measure of accuracy, the likely turnover in the portfolio.

There may be an increase in transaction costs such as brokerage paid, if trading is done frequently. However, it will be endeavored to keep the turnover as low as possible. The fund

manager will endeavour to minimize portfolio turnover to maximize long term gains. However, it is difficult to estimate with reasonable accuracy, the likely turnover in the portfolio of the Scheme. The Scheme has no specific target relating to portfolio turnover.

## Risk profile of the scheme

Mutual Fund Units involve investment risks including the possible loss of principal. Please read the SID carefully for details on risk factors before investment.

### Scheme specific Risk Factors are summarized below:

By virtue of requirements under the ELSS Guidelines, Units issued under the Scheme will not be redeemed until the expiry of 3 (three) years from the date of their allotment. The ability of an investor to realise returns on investments in the Scheme is consequently restricted for the first three years unless there is transmission of units having been held for a period of 1 (one) year from the date of their allotment.

## Risks associated with investments in Equity and Equity related instruments:

Investments in equity and equity related securities involve a degree of risk and investors should not invest in equity schemes unless they afford to take the risk of losing their investment. Equity instruments by nature are volatile and prone to price fluctuations daily due to both micro and macro factors. Volatility in the capital markets, changes in policies of the Government, taxation laws or any other political and economic development may negatively affect the prices of the securities invested in by the Scheme. Trading volumes, settlement periods and transfer procedures may restrict the liquidity of some of the investments. The Scheme inter-alia also may be exposed to the risk arising from over exposure to few securities/issuers/sectors.

#### Risks associated with investments in Fixed Income Securities:

The NAV of the Scheme, to the extent invested in fixed income securities, will be affected by changes in the interest rates due to various factors such as government borrowing, inflation, economic performance etc. The NAV of the Scheme is expected to increase from a fall in interest rates while it would be adversely affected by an increase in the level of interest rates. Investments in Fixed Income securities may inter-alia carry Re-investment Risk, Spread Risk, Credit/Default Risk, Liquidity Risk, Prepayment Risk, etc.

## **Risks associated with Derivatives**

The Scheme may invest in derivative products in accordance with and to the extent permitted under the Regulations and ELSS guidelines. The use of derivatives requires an understanding of the underlying instruments and the derivatives themselves. The risk of investments in derivatives includes mispricing or improper valuation and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.

## Risk associated with investing in Foreign Securities

Subject to necessary regulatory approvals and within the investment objectives of the Scheme, the Scheme may invest in overseas markets which carry risks related to fluctuations in the foreign exchange rates, the nature of the securities market of the country, repatriation of capital due to exchange controls and political circumstances. It is AMC's belief that investment in foreign securities offer new investment and portfolio diversification opportunities into multimarket and multicurrency products. However, such investments also entail additional risks. Such investment opportunities may be pursued by AMC provided they are considered appropriate in terms of the overall investment objectives of the Scheme. Since the Scheme may

invest only partially in foreign securities, there may not be readily available and widely accepted benchmarks to measure performance of the Scheme.

#### Risks associated with investing in Securities Segment and Tri-party Repo trade settlement

The mutual fund is exposed to the extent of its contribution to the default fund of CCIL at any given point in time i.e. in the event that the default waterfall is triggered, and the contribution of the mutual fund is called upon to absorb settlement/default losses of another member by CCIL, the scheme may lose an amount equivalent to its contribution to the default fund.

## Risks associated with Short Selling & Securities Lending

Securities Lending is a lending of securities through an approved intermediary to a borrower under an agreement for a specified period with the condition that the borrower will return equivalent securities of the same type or class at the end of the specified period along with the corporate benefits accruing on the securities borrowed. There are risks inherent in securities lending, including the risk of failure of the other party, in this case the approved intermediary to comply with the terms of the agreement. Such failure can result in a possible loss of rights to the collateral, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of corporate benefits accruing thereon.

Short selling is the sale of shares or securities that the seller does not own at the time of trading. Instead, he borrows it from someone who already owns it. Later, the short seller buys back the stock/security he shorted and returns the stock/security to the lender to close out the loan. The inherent risks are Counterparty risk and liquidity risk of the stock/security being borrowed. The security being short sold might be illiquid or become illiquid and covering of the security might occur at a much higher price level than anticipated, leading to losses.

### Risks associated with transaction in Units through stock exchange(s):

In respect of transaction in Units of the Scheme through Bombay Stock Exchange ("BSE") and / or National Stock Exchange ("NSE"), allotment and redemption of Units on any Business Day will depend upon the order processing / settlement by NSE and / or BSE and their respective clearing corporations on which the Fund has no control.

#### **Risks associated with Restrictions on Redemption:**

The Trustee and the AMC may impose restrictions on redemptions when there are circumstances leading to a systemic crisis or event that severely constricts market liquidity or the efficient functioning of markets. Accordingly, such restriction may affect the liquidity of the Scheme and there may be a delay in investors receiving part of their redemption proceeds.

### Risks associated with Segregated portfolio:

The AMC / Trustee shall decide on creation of segregated portfolio of the Scheme in case of a credit event at issuer level i.e. downgrade in credit rating by a Credit Rating Agencies (CRA) or actual default of either the interest or principal amount, in case of its unrated debt or money market instruments. Accordingly, Investor holding units of segregated portfolio may not able to liquidate their holding till the time recovery of money from the issuer. The Security comprises of segregated portfolio may not realize any value.

Further, listing of units of segregated portfolio in recognized stock exchange does not necessarily guarantee their liquidity. There may not be active trading of units in the stock market. Further trading price of units on the stock market may be significantly lower than the prevailing NAV.

For details on risk factors and risk mitigation measures, please refer SID.

## **Stamp Duty**

Pursuant to Notification No. S.O. 1226(E) and G.S.R. 226(E) dated March 30, 2020 issued by Department of Revenue, Ministry of Finance, Government of India, read with Part I of Chapter IV of Notification dated February 21, 2019 issued by Legislative Department, Ministry of Law and Justice, Government of India on the Finance Act, 2019, stamp duty @0.005% of the transaction value would be levied on applicable mutual fund transactions.

Accordingly, pursuant to levy of stamp duty, the number of units allotted on purchases, switchins, Systematic Investment Plan (SIP) installments, Systematic Transfer Plan (STP) installments, Reinvestment of Income Distribution cum Capital Withdrawal etc. to the unit holders would be reduced to that extent. Units will be created only for the balance amount i.e. Net Investment Amount as reduced by the stamp duty. The stamp duty will be computed at the rate of 0.005% on an inclusive method basis.

For instance: If the transaction amount is Rs. 100,000 /-. the stamp duty will be calculated as follows: ((Transaction Amount \*0.005%) = Rs. 5.

If the applicable Net Asset Value (NAV) is Rs. 10 per unit, then units allotted will be calculated as follows: (Transaction Amount – Stamp Duty)/ Applicable NAV = 9,999.50 units.
