

# Factsheet

February 2024

**SAMCO**  
MUTUAL FUND

# How to Read Factsheet

**Fund Manager:** An employee of the asset management company such as a mutual fund or life insurer, who manages investments of the scheme. He/She is usually part of a larger team of fund managers and research analysts.

**Application Amount for Fresh Subscription:** This is the minimum investment amount for a new investor in a mutual fund scheme.

**Minimum Additional Amount:** This is the minimum investment amount for an existing investor in a mutual fund scheme.

**SIP:** Systematic Investment Plan (SIP) works on the principle of making periodic investments of a fixed sum. It works similar to a recurring bank deposit. For instance, an investor may opt for a SIP that invests ₹500 on every 15th of a month in an equity fund for a period of three years.

**NAV:** The NAV or the net asset value is the total asset value per unit of the mutual fund after deducting all related and permissible expenses. The NAV is calculated at the end of every business day. It is the value at which an investor enters or exits the mutual fund.

**Benchmark:** A group of securities, usually a market index, whose performance is used as a standard or benchmark to measure investment performance of mutual funds. Some typical benchmarks include the NIFTY, Sensex, BSE200, NSE500, Crisil Liquid Fund Index and 10-Year Gsec.

**Entry Load:** A mutual fund may have a sales charge or load at the time of entry and/or exit to compensate the distributor/agent. Entry load is charged when an investor purchases the units of a mutual fund. The entry load is added to the prevailing NAV at the time of investment. For instance, if the NAV is ₹100 and the entry load is 1%, the investor will enter the fund at ₹101.

**Note:** SEBI, vide circular dated June 30, 2009 has abolished entry load and mandated that the upfront commission to distributors will be paid by the investor directly to the distributor, based on his assessment of various factors including the service rendered by the distributor.

**Exit Load:** Exit load is charged when an investor redeems the units of a mutual fund. The exit load is reduced from the prevailing NAV at the time of redemption. The investor will receive redemption proceeds at net value of NAV less Exit Load. For instance, if the NAV is ₹100 and the exit load is 1%, the investor will receive ₹99 per unit.

**Modified Duration:** Modified duration is the price sensitivity and the percentage change in price for a unit change in yield.

**Average Maturity:** The average time of maturity of all the debt securities held in a portfolio. It states the weighted average maturity of the assets in the portfolio.

**Yield to Maturity (YTM):** The Yield to Maturity or the YTM is the rate of return anticipated on a bond is held until maturity. YTM is expressed as an annual rate. The YTM factors in the bond's current market price, par value, coupon interest rate and time to maturity.

**Standard Deviation:** Standard deviation is a statistical measure of the range of an investment's performance. When a mutual fund has a high standard deviation, it means its range of performance is wide, implying greater volatility.

**Macaulay duration:** The Macaulay duration is the weighted average term to maturity of the cash flows from a bond. The weight of each cash flow is determined by dividing the present value of the cash flow by the price

**Sharpe Ratio:** The Sharpe Ratio, named after its founder, the Nobel Laureate William Sharpe, is a measure of risk-adjusted returns. It is calculated using standard deviation and excess return to determine reward per unit of risk.

**Beta Ratio (Portfolio Beta):** Beta is a measure of an investment's volatility vis-a-vis the market. Beta of less than 1 means that the security will be less volatile than the market. A beta of greater than 1 implies that the security's price will be more volatile than the market.

**AUM:** AUM or assets under management refers to the recent/ updated cumulative market value of investments managed by a mutual fund or any investment firm.

**Holdings:** The holdings or the portfolio is a mutual fund's latest or updated reported statement of investments/securities. These are usually displayed in terms of percentage to net assets or the rupee value or both. The objective is to give investors an idea of where their money is being invested by the fund manager.

**Nature of Scheme:** The investment objective and underlying investments determine the nature of the mutual fund scheme. For instance, a mutual fund that aims at generating capital appreciation by investing in stock markets is termed an equity fund or growth fund. Likewise, a mutual fund that aims at capital preservation by investing in debt markets is a debt fund or income fund. Each of these categories may have sub-categories.

**Rating Profile:** Mutual funds invest in securities after evaluating their creditworthiness as disclosed by the ratings. A depiction of the mutual fund in various investments based on their ratings becomes the rating profile of the fund. Typically, this is a feature of debt funds.

**Total Expense Ratio:** Total expenses charged to scheme for the month expressed as a percentage to average monthly net assets.

**Portfolio Turnover Ratio:** Portfolio Turnover Ratio is the percentage of a fund's holdings that have changed in a given year. This ratio measures the fund's trading activity, which is computed by taking the lesser of purchases or sales and dividing by average monthly net assets.

# About Strategy

## HEXASHIELD TESTED INVESTMENTS

Buy and hold

HexaShield Tested Investments is a strategy to put to work money with businesses that can endure and survive in a variety of stressful situations and generate superior long-term risk adjusted returns. It relies on understanding the resilience of companies based on Samco's HexaShield framework tests and evaluates every company and institution on 6 most important facets of risks and stress. These tests are meant to measure every company's ability to maintain enough buffer to stay afloat under adverse economic scenarios. The HexaShield tests are also designed to understand if these companies can generate high cash returns on capital employed in a variety of economic conditions including degrowth, recession, etc. This rigorous scientific and statistical process helps get an understanding of risks, reduces room for bias and beliefs, inculcates discipline and enhances the probability of success.

## 3E Investment Strategy

1. Buy only **Efficient HexaShield Tested Companies**
2. Buy at an **Efficient Price**
3. Maintain an **Efficient Turnover**

## DISTINCTIVE PATTERN STRATEGY

Momentum

Momentum refers to the tendency of winning stocks to continue to perform well and losing stocks to perform poorly in the near future. In Momentum strategy the stocks are also selected based on their performance in the past with the idea that they will continue to outperform. The investors are attracted to a company whose price is on an upward trajectory thus opening a new way of buying at high and selling at higher, instead of the traditional idea of buying at low and selling at high, generating higher returns. Momentum strategies exploit this continuation in return patterns in order to make a profit.

Stocks in Momentum could be selected via Time Series Momentum or Cross-sectional Momentum. Time-series momentum and Cross-sectional momentum are two distinct measures used to evaluate the performance of stocks. Time-series momentum, also known as absolute momentum, assesses a stock's past performance by considering its own returns independently from the returns of other stocks. On the other hand, cross-sectional momentum, previously known as relative strength, measures a stock's performance in comparison to other stocks. A mix of methodologies to compute momentum are used which include but are not limited to Risk-adjusted Price Momentum, Momentum Strength Score & Momentum ratio.

The fund makes trades based on trading signals generated by the intelligent algorithm. This algorithm has been developed by studying years of market data including price, volume, volatility, open interest, breakouts, relative strengths and correlations with appropriate weights on various data points. The Momentum investing is based on that gap in time that exists before mean reversion occurs. Momentum is usually seen in the short- to intermediate-term.

Each stock shall be assigned a momentum score based on SAMCO's proprietary model that is based on variety of factors including price momentum, breakouts and for additional inputs, fundamental qualities such size, value and quality are also taken into consideration. The selection of stocks and their weightage is based on the momentum score, free float market cap and other factors.

# Samco Flexi Cap Fund

(An open-ended dynamic equity scheme investing across large cap, mid cap, small cap stocks)

## Investment Objective

The investment objective of the Scheme is to seek to generate long-term capital growth from an actively managed portfolio of Indian & foreign equity instruments across market capitalisation. However, there is no assurance or guarantee that the investment objective of the Scheme will be achieved.

## Industry Allocation of Equity Holding (% of Net Assets)

## Market Capitalisation (% of allocation)

# Samco Flexi Cap Fund

(An open-ended dynamic equity scheme investing across large cap, mid cap, small cap stocks)

## Portfolio Comment for February 2024

We have deployed 95.61% of our AUM, maintaining an asset allocation of 87.51% in Indian Equities, 8.10% in International Equities, and 4.39% in TREPS, Cash, Cash Equivalents, and Net Current Assets as of February 29, 2024.

This month there were some strategic reshuffles in the portfolio. Dabur and Poonawalla Fincorp Limited exited the portfolio while Patanjali Foods Limited and Swan Energy are the new entrants. Dabur's exit was more because of slow growth and margin compression. Poonawalla Fincorp was tactical and from a profit booking perspective given the run-up it has seen. Patanjali Foods on the other hand has revenue visibility with positive growth prospects, particularly within the under-penetrated Food & FMCG and Palm plantations business. For Swan Energy we anticipate growth as spending on defence and oil and gas industries have huge tailwinds. Amidst these portfolio rejigs, we remain focused on our commitment to managing risks and capitalizing on emerging opportunities. Our disciplined approach to portfolio management ensures that we are well-positioned to navigate market dynamics and deliver optimal risk adjusted returns for our investors.

The top 5 contributors to performance this month were Meta Platforms Registered Shares A, ICICI Lombard General Insurance Company Ltd, Tata Consultancy Services Ltd, Coforge Limited and Aditya Birla Capital Limited. However, detractors to performance were J B Chemicals and Pharma Ltd, Divis Laboratories Ltd, LTIMindtree Limited, Crompton Greaves Consumer Electricals Limited and Balkrishna Industries Ltd.

Sectoral weightages have increased in Realty, Agricultural Food & other Products, Capital Markets and Insurance while reduced in Finance, Personal Products and IT - Software this month.

## Disclosure on Active Share

The Active Share was first introduced by Martijn Cremers and Antti Petajisto, both Yale School of Management professors whose concepts were first published in the Review of Financial Studies 2009 paper titled "How active is your Fund Manager"- A New Measure That Predicts Performance.

Active Share measures the fraction of a portfolio (based on position weights) that differs from the benchmark index. The only way that the equity fund manager can outperform a given benchmark is by taking positions that differ from those in the benchmark. Active Share will always fall between 0% and 100%, where 0% will indicate a truly passive index fund and a higher percentage closer to 100% will show true active management with portfolio stocks diverging from the benchmark.

### Disclaimer :

We are voluntarily disclosing the Active Share of Samco Flexi Cap Fund in the interest of maintaining high transparency to the investors.

Please refer to our website [www.samcomf.com/active-share/samco-flexi-cap-fund](http://www.samcomf.com/active-share/samco-flexi-cap-fund) to view how to calculate active share.

The information on Active Share should not be construed as a forecast or promise of returns or safeguard of capital. The Investors who must make their own investment decisions, based on their own investment objectives, financial positions and needs of specific investor.

## Industry Allocation of Equity Holding (% of Net Assets)

## Market Capitalisation (% of allocation)

# Samco ELSS Tax Saver Fund

(An open-ended Equity Linked Saving Scheme with a statutory lock-in of 3 years and tax benefit.)

## Portfolio Comment for February 2024

We have deployed 79.14% of our AUM in Indian Equities and 20.86% in TREPS, Cash, Cash Equivalents and Net Current Asset as of February 29, 2024.

The month of February was marked by significant volatility, particularly in the small cap and mid cap segments, with Nifty Midcap 150 and Nifty Smallcap 250 indices registering fresh all-time highs before showing some correction. Despite the swings, our Fund continued to maintain its discipline and sailed through the downtimes efficiently. There were some modest adjustments made to the portfolio with the exit of APL Apollo Limited and entry of Swan Energy. Although, APL Apollo passes our proprietary HexaShield Framework, the decision to exit this stock allowed us to capitalise on its positive price movement and optimize our composition. For Swan Energy we anticipate growth as spending on defence and oil and gas industries have huge tailwinds. This is aligned with our commitment to enhance risk adjusted returns.

Our current portfolio comprises of 35 quality businesses which are well diversified across various sectors. In light of the prevailing market conditions, we remain prudent while deploying capital and continue to look for opportunities that show value and future earnings growth potential. Our focus on identifying quality businesses with robust fundamentals and compelling growth prospects remain steadfast.

# Samco Active Momentum Fund

(An open-ended equity scheme following momentum theme)

## Investment Objective

The investment objective of the Scheme is to seek to generate long-term capital appreciation by investing in stocks showing strong momentum. Momentum stocks are such that exhibit positive price momentum – based on the phenomenon that stocks which have performed well in the past relative to other stocks (winners) continue to perform well in the future, and stocks that have performed relatively poorly (losers) continue to perform poorly. However, there can be no assurance or guarantee that the investment objective of the scheme would be achieved.

(An open-ended equity scheme following momentum theme)

## Portfolio Comment for February 2024

The month of February was marked by significant volatility, particularly in the small-cap and mid-cap segments of the market. Despite this volatility, both the Nifty Midcap 150 and Nifty Smallcap 250 indices reached fresh all-time highs, however closing down by 0.29% and 0.65% respectively during the month, showing an indecisive move. Meanwhile, the headline index Nifty50 registered a new lifetime high, rising by 1.18% during the month.

Adhering to our fund's strategy, we proactively managed our portfolio by ensuring allocation to areas of the market with significant momentum while exiting positions showing signs of fading momentum. Additionally, effective hedged positions were implemented to safeguard the portfolio from heightened volatility and downside risks. Looking ahead, we remain committed to strategically positioning our fund in areas of momentum while proactively managing risks to optimize returns.

We have deployed 72.72% of net assets in Indian Equities and 27.28% in TREPS, Cash, Cash Equivalents and Net Current Asset as of February 29, 2024.

## Disclosure on Active Share

The Active Share was first introduced by Martijn Cremers and Antti Petajisto, both Yale School of Management professors whose concepts were first published in the Review of Financial Studies 2009 paper titled "How active is your Fund Manager"- A New Measure That Predicts Performance.

Active Share measures the fraction of a portfolio (based on position weights) that differs from the benchmark index. The only way that the equity fund manager can outperform a given benchmark is by taking positions that differ from those in the benchmark. Active Share will always fall between 0% and 100%, where 0% will indicate a truly passive index fund and a higher percentage closer to 100% will show true active management with portfolio stocks diverging from the benchmark.

### Disclaimer :

We are voluntarily disclosing the Active Share of Samco Active Momentum Fund in the interest of maintaining high transparency to the investors. Please refer to our website [www.samcomf.com/active-share/samco-active-momentum-fund](http://www.samcomf.com/active-share/samco-active-momentum-fund) to view how to calculate active share.

The information on Active Share should not be construed as a forecast or promise of returns or safeguard of capital. The Investors who must make their own investment decisions, based on their own investment objectives, financial positions and needs of specific investor.

# Samco Dynamic Asset Allocation Fund

(An open-ended dynamic asset allocation fund)

## Investment Objective

The investment objective of the Scheme is to generate income/long-term capital appreciation by investing in equity, equity derivatives, fixed income instruments and foreign securities. The allocation between equity instruments and fixed income will be managed dynamically so as to provide investors with long term capital appreciation while managing downside risk. However, there can be no assurance or guarantee that the investment objective of the scheme would be achieved.

## Portfolio Comment for February 2024

During the month of February, both the small-cap and mid-cap segments reached new lifetime highs. The Nifty index also registered new highs during the month.

As we continue to construct our portfolio, we utilize our proprietary Transformer Model to build a balanced portfolio comprised of debt and equity instruments in a staggered manner. Our goal remains to create a well-diversified portfolio consisting of momentum-driven stocks and debt instruments. This strategic approach aims to provide a balanced return profile while mitigating downside risks.

Given the recent surge in the Indian equity markets, our Transformer Model indicates fewer opportunities for fresh capital deployment. Consequently, our portfolio is currently skewed towards debt instruments and arbitrage. However, we are determined to position the portfolio in areas of momentum as opportunities arise. Additionally, we have implemented hedged positions within our portfolio to shield it from heightened volatility and protect against downside risks. Through our prudent approach to portfolio management and strategic positioning, we are dedicated to navigating market dynamics and delivering optimal returns for our investors.

As of February 29, 2024, the fund has gross equity of 27.92% whereas net equities stand at 15.02%, fixed income instruments comprise of 25.58% and remaining balance of 46.50% is TREPS, Cash, Cash Equivalents, and Net Current Assets.

## Disclosure on Active Share

The Active Share was first introduced by Martijn Cremers and Antti Petajisto, both Yale School of Management professors whose concepts were first published in the Review of Financial Studies 2009 paper titled "How active is your Fund Manager"- A New Measure That Predicts Performance.

Active Share measures the fraction of a portfolio (based on position weights) that differs from the benchmark index. The only way that the equity fund manager can outperform a given benchmark is by taking positions that differ from those in the benchmark. Active Share will always fall between 0% and 100%, where 0% will indicate a truly passive index fund and a higher percentage closer to 100% will show true active management with portfolio stocks diverging from the benchmark.

\*The calculation of active share henceforth will be on free float market capitalization, a change from full market capitalization.
