

Factsheet

October 2023

SAMCO
MUTUAL FUND

How to Read Factsheet

Fund Manager: An employee of the asset management company such as a mutual fund or life insurer, who manages investments of the scheme. He/She is usually part of a larger team of fund managers and research analysts.

Application Amount for Fresh Subscription: This is the minimum investment amount for a new investor in a mutual fund scheme.

Minimum Additional Amount: This is the minimum investment amount for an existing investor in a mutual fund scheme.

SIP: Systematic Investment Plan (SIP) works on the principle of making periodic investments of a fixed sum. It works similar to a recurring bank deposit. For instance, an investor may opt for a SIP that invests ₹500 on every 15th of a month in an equity fund for a period of three years.

NAV: The NAV or the net asset value is the total asset value per unit of the mutual fund after deducting all related and permissible expenses. The NAV is calculated at the end of every business day. It is the value at which an investor enters or exits the mutual fund.

Benchmark: A group of securities, usually a market index, whose performance is used as a standard or benchmark to measure investment performance of mutual funds. Some typical benchmarks include the NIFTY, Sensex, BSE200, NSE500, Crisil Liquid Fund Index and 10-Year Gsec.

Entry Load: A mutual fund may have a sales charge or load at the time of entry and/or exit to compensate the distributor/agent. Entry load is charged when an investor purchases the units of a mutual fund. The entry load is added to the prevailing NAV at the time of investment. For instance, if the NAV is ₹100 and the entry load is 1%, the investor will enter the fund at ₹101.

Note: SEBI, vide circular dated June 30, 2009 has abolished entry load and mandated that the upfront commission to distributors will be paid by the investor directly to the distributor, based on his assessment of various factors including the service rendered by the distributor.

Exit Load: Exit load is charged when an investor redeems the units of a mutual fund. The exit load is reduced from the prevailing NAV at the time of redemption. The investor will receive redemption proceeds at net value of NAV less Exit Load. For instance, if the NAV is ₹100 and the exit load is 1%, the investor will receive ₹99 per unit.

Modified Duration: Modified duration is the price sensitivity and the percentage change in price for a unit change in yield.

Average Maturity: The average time of maturity of all the debt securities held in a portfolio. It states the weighted average maturity of the assets in the portfolio.

Yield to Maturity (YTM): The Yield to Maturity or the YTM is the rate of return anticipated on a bond is held until maturity. YTM is expressed as an annual rate. The YTM factors in the bond's current market price, par value, coupon interest rate and time to maturity.

Standard Deviation: Standard deviation is a statistical measure of the range of an investment's performance. When a mutual fund has a high standard deviation, it means its range of performance is wide, implying greater volatility.

Macaulay duration: The Macaulay duration is the weighted average term to maturity of the cash flows from a bond. The weight of each cash flow is determined by dividing the present value of the cash flow by the price

Sharpe Ratio: The Sharpe Ratio, named after its founder, the Nobel Laureate William Sharpe, is a measure of risk-adjusted returns. It is calculated using standard deviation and excess return to determine reward per unit of risk.

Beta Ratio (Portfolio Beta): Beta is a measure of an investment's volatility vis-a-vis the market. Beta of less than 1 means that the security will be less volatile than the market. A beta of greater than 1 implies that the security's price will be more volatile than the market.

AUM: AUM or assets under management refers to the recent/ updated cumulative market value of investments managed by a mutual fund or any investment firm.

Holdings: The holdings or the portfolio is a mutual fund's latest or updated reported statement of investments/securities. These are usually displayed in terms of percentage to net assets or the rupee value or both. The objective is to give investors an idea of where their money is being invested by the fund manager.

Nature of Scheme: The investment objective and underlying investments determine the nature of the mutual fund scheme. For instance, a mutual fund that aims at generating capital appreciation by investing in stock markets is termed an equity fund or growth fund. Likewise, a mutual fund that aims at capital preservation by investing in debt markets is a debt fund or income fund. Each of these categories may have sub-categories.

Rating Profile: Mutual funds invest in securities after evaluating their creditworthiness as disclosed by the ratings. A depiction of the mutual fund in various investments based on their ratings becomes the rating profile of the fund. Typically, this is a feature of debt funds.

Total Expense Ratio: Total expenses charged to scheme for the month expressed as a percentage to average monthly net assets.

Portfolio Turnover Ratio: Portfolio Turnover Ratio is the percentage of a fund's holdings that have changed in a given year. This ratio measures the fund's trading activity, which is computed by taking the lesser of purchases or sales and dividing by average monthly net assets.

About Strategy

HEXASHIELD TESTED INVESTMENTS

Buy and hold

DISTINCTIVE PATTERN STRATEGY

Momentum

HexaShield Tested Investments is a strategy to put to work money with businesses that can endure and survive in a variety of stressful situations and generate superior long-term risk adjusted returns. It relies on understanding the resilience of companies based on Samco's HexaShield framework tests and evaluates every company and institution on 6 most important facets of risks and stress. These tests are meant to measure every company's ability to maintain enough buffer to stay afloat under adverse economic scenarios. The HexaShield tests are also designed to understand if these companies can generate high cash returns on capital employed in a variety of economic conditions including degrowth, recession, etc. This rigorous scientific and statistical process helps get an understanding of risks, reduces room for bias and beliefs, inculcates discipline and enhances the probability of success.

3E Investment Strategy

1. Buy only **Efficient HexaShield Tested Companies**
2. Buy at an **Efficient Price**
3. Maintain an **Efficient Turnover**

Momentum refers to the tendency of winning stocks to continue to perform well and losing stocks to perform poorly in the near future. In Momentum strategy the stocks are also selected based on their performance in the past with the idea that they will continue to outperform. The investors are attracted to a company whose price is on an upward trajectory thus opening a new way of buying at high and selling at higher, instead of the traditional idea of buying at low and selling at high, generating higher returns. Momentum strategies exploit this continuation in return patterns in order to make a profit.

Stocks in Momentum could be selected via Time Series Momentum or Cross-sectional Momentum. Time-series momentum and Cross-sectional momentum are two distinct measures used to evaluate the performance of stocks. Time-series momentum, also known as absolute momentum, assesses a stock's past performance by considering its own returns independently from the returns of other stocks. On the other hand, cross-sectional momentum, previously known as relative strength, measures a stock's performance in comparison to other stocks. A mix of methodologies to compute momentum are used which include but are not limited to Risk-adjusted Price Momentum, Momentum Strength Score & Momentum ratio.

The fund makes trades based on trading signals generated by the intelligent algorithm. This algorithm has been developed by studying years of market data including price, volume, volatility, open interest, breakouts, relative strengths and correlations with appropriate weights on various data points. The Momentum investing is based on that gap in time that exists before mean reversion occurs. Momentum is usually seen in the short- to intermediate-term.

Each stock shall be assigned a momentum score based on SAMCO's proprietary model that is based on variety of factors including price momentum, breakouts and for additional inputs, fundamental qualities such size, value and quality are also taken into consideration. The selection of stocks and their weightage is based on the momentum score, free float market cap and other factors.

Samco Flexi Cap Fund

(An open-ended dynamic equity scheme investing across large cap, mid cap, small cap stocks)

Investment Objective

The investment objective of the Scheme is to seek to generate long-term capital growth from an actively managed portfolio of Indian & foreign equity instruments across market capitalisation. However, there is no assurance or guarantee that the investment objective of the Scheme will be achieved.

Industry Allocation of Equity Holding (% of Net Assets)

Market Capitalisation (% of allocation)

Samco Flexi Cap Fund

(An open-ended dynamic equity scheme investing across large cap, mid cap, small cap stocks)

Portfolio Comment for October 2023

We have deployed 98.54% of our AUM and our asset allocation is 92.12% in Indian Equities, 6.42% in International Equities and 1.46% in TREPS, Cash, Cash Equivalents and Net Current Asset as of October 31, 2023.

During this month, we added a FMCG business to the portfolio. We added Gillette India to our Indian holdings. With Gillette India's strong financials, we believe it is well-positioned for growth, offering substantial upside potential with strong brand name recognition. We have confidence in its prospects due to its asset-light business model, brand positioning, and appealing return ratios. Going forward, we will maintain proactive portfolio management, taking into account a range of factors that could influence the performance of invested businesses and their respective industries in future.

The top 5 contributors to performance this month were Supreme Industries, ICICI Lombard, Bajaj Finserv, Microsoft Corp and Novo Nordisk. The top 5 detractors to performance were, Computer Age Management Services, L&T Technology Services, Bajaj Finance, Tata Consultancy Services, and J B Chemicals and Pharma.

Our sectoral weightages have increased in Personal Products, Finance, Industrial Products and Insurance while our weightages have reduced in Chemicals & Petrochemicals, Consumer Durables, Capital Markets and Pharmaceuticals & Biotechnology this month.

Disclosure on Active Share

The Active Share was first introduced by Martijn Cremers and Antti Petajisto, both Yale School of Management professors whose concepts were first published in the Review of Financial Studies 2009 paper titled "How active is your Fund Manager"- A New Measure That Predicts Performance.

Active Share measures the fraction of a portfolio (based on position weights) that differs from the benchmark index. The only way that the equity fund manager can outperform a given benchmark is by taking positions that differ from those in the benchmark. Active Share will always fall between 0% and 100%, where 0% will indicate a truly passive index fund and a higher percentage closer to 100% will show true active management with portfolio stocks diverging from the benchmark.

*The calculation of active share henceforth will be on free float market capitalization, a change from full market capitalization.

Disclaimer :

We are voluntarily disclosing the Active Share of Samco Flexi Cap Fund in the interest of maintaining high transparency to the investors.

Please refer to our website www.samcomf.com/active-share/samco-flexi-cap-fund to view how to calculate active share.

The information on Active Share should not be construed as a forecast or promise of returns or safeguard of capital. The Investors who must make their own investment decisions, based on their own investment objectives, financial positions and needs of specific investor.

Samco ELSS Tax Saver Fund

(An open-ended Equity Linked Saving Scheme with a statutory lock-in of 3 years and tax benefit.)

Portfolio Comment for October 2023

We have deployed 80.67% of our AUM in Indian Equities and 19.33% in TREPS, Cash, Cash Equivalents and Net Current Asset as of October 31, 2023.

During this month, we added a FMCG business to the portfolio. We added Gillette India to the portfolio. With Gillette India's strong financials, we believe it is well-positioned for growth, offering substantial upside potential with strong brand name recognition. We have confidence in its prospects due to its asset-light business model, brand positioning, and appealing return ratios. We intend to continue allocating the remaining amount opportunistically among the existing stocks.

Our deployment strategy is characterized by a high degree of efficiency, meticulously assessing individual stock risks and their margin of safety, while also considering macroeconomic risks and their correlation with the portfolio. We actively seek investments in businesses capable of navigating market volatility gracefully with minimal downside potential. This is achievable thanks to the well-diversified sector and stock exposure within mid and small-cap businesses, minimizing concentration risk. Our commitment lies in maintaining the utmost diligence in the investment approach, aiming to deliver consistent and favorable risk-adjusted returns.

Disclosure on Active Share

Samco Active Momentum Fund

(An open-ended equity scheme following momentum theme)

Investment Objective

The investment objective of the Scheme is to seek to generate long-term capital appreciation by investing in stocks showing strong momentum. Momentum stocks are such that exhibit positive price momentum – based on the phenomenon that stocks which have performed well in the past relative to other stocks (winners) continue to perform well in the future, and stocks that have performed relatively poorly (losers) continue to perform poorly. However, there can be no assurance or guarantee that the investment objective of the scheme would be achieved.

Samco Active Momentum Fund

(An open-ended equity scheme following momentum theme)

Portfolio Comment for October 2023

The month of October 2023 witnessed a lot of volatility due to geopolitical unrest. Steep escalation in the conflict between Israel and Gaza has put the entire world in shock. Going forward volatility can increase. Last month majority of the indices made new all-time highs, but majority of them were not able to sustain those levels this month. Out of the Nifty50, Next50, Midcap 150, Smallcap 250 and Microcap 250 indices only the smallcap 250 and microcap 250 indices were able to create new highs in the month of October 2023. This shows relative strength in Small caps is higher currently.

October was overall a negative return month for all the five indices mentioned above. But, the indices that was the strongest during the uptrend i.e. the Micro cap 250 index also has been the one to fall the least this month maintaining its relative strength. As your fund follows the momentum style of investing, it picked up on stocks from the small cap space that have been stronger and continue to remain strong even during weaker markets.

We have deployed 84.75% of net assets in Indian Equities and 15.25% in TREPS, Cash, Cash Equivalents and Net Current Asset as of October 31, 2023.

Disclosure on Active Share

Introducing

Samco Dynamic Asset Allocation Fund

(An open-ended dynamic asset allocation fund)

Built on the TRANSFORMER model

Samco Dynamic Asset Allocation Fund is built on our proprietary TRANSFORMER model that determines equity and debt allocation based on primary market trends. It transforms in real time to debt & arbitrage mode to protect downside during downtrends and participates in uptrends with greater equity exposure.

Powered by  Distinctive Pattern Strategies

NFO Opens on **07/12/2023**

NFO Closes on **21/12/2023**

NFO Smart Autoswitch available via Samco Overnight Fund
