

# Factsheet

October 2025

**SAMCO**  
MUTUAL FUND

| *Cutting-edge Systems  
For Wealth Creation*

# How to Read Factsheet

**Fund Manager:** An employee of the asset management company such as a mutual fund or life insurer, who manages investments of the scheme. He/She is usually part of a larger team of fund managers and research analysts.

**Application Amount for Fresh Subscription:** This is the minimum investment amount for a new investor in a mutual fund scheme.

**Minimum Additional Amount:** This is the minimum investment amount for an existing investor in a mutual fund scheme.

**SIP:** Systematic Investment Plan (SIP) works on the principle of making periodic investments of a fixed sum. It works similar to a recurring bank deposit. For instance, an investor may opt for a SIP that invests ₹500 on every 15th of a month in an equity fund for a period of three years.

**NAV:** The NAV or the net asset value is the total asset value per unit of the mutual fund after deducting all related and permissible expenses. The NAV is calculated at the end of every business day. It is the value at which an investor enters or exits the mutual fund.

**Benchmark:** A group of securities, usually a market index, whose performance is used as a standard or benchmark to measure investment performance of mutual funds. Some typical benchmarks include the NIFTY, Sensex, BSE200, NSE500, Crisil Liquid Fund Index and 10-Year Gsec.

**Entry Load:** A mutual fund may have a sales charge or load at the time of entry and/or exit to compensate the distributor/agent. Entry load is charged when an investor purchases the units of a mutual fund. The entry load is added to the prevailing NAV at the time of investment. For instance, if the NAV is ₹100 and the entry load is 1%, the investor will enter the fund at ₹101.

**Note:** SEBI, vide para 10.4 of SEBI Master circular No. SEBI/HO/IMD/IMD-PoD-1/P/CIR/2024/90 dated June 27, 2024 has abolished entry load and mandated that the upfront commission to distributors will be paid by the investor directly to the distributor, based on his assessment of various factors including the service rendered by the distributor.

**Exit Load:** Exit load is charged when an investor redeems the units of a mutual fund. The exit load is reduced from the prevailing NAV at the time of redemption. The investor will receive redemption proceeds at net value of NAV less Exit Load. For instance, if the NAV is ₹100 and the exit load is 1%, the investor will receive ₹99 per unit.

**Modified Duration:** Modified duration is the price sensitivity and the percentage change in price for a unit change in yield.

**Average Maturity:** Average Maturity: The average time of maturity of all the debt securities held in a portfolio. It states the weighted average maturity of the assets in the portfolio.

**Yield to Maturity (YTM):** The Yield to Maturity or the YTM is the rate of return anticipated on a bond is held until maturity. YTM is expressed as an annual rate. The YTM factors in the bond's current market price, par value, coupon interest rate and time to maturity.

**Standard Deviation:** Standard deviation is a statistical measure of the range of an investment's performance. When a mutual fund has a high standard deviation, it means its range of performance is wide, implying greater volatility.

**Macaulay duration:** The Macaulay duration is the weighted average term to maturity of the cash flows from a bond. The weight of each cash flow is determined by dividing the present value of the cash flow by the price

**Sharpe Ratio:** The Sharpe Ratio, named after its founder, the Nobel Laureate William Sharpe, is a measure of risk-adjusted returns. It is calculated using standard deviation and excess return to determine reward per unit of risk.

**Beta Ratio (Portfolio Beta):** Beta is a measure of an investment's volatility vis-a-vis the market. Beta of less than 1 means that the security will be less volatile than the market. A beta of greater than 1 implies that the security's price will be more volatile than the market.

**AUM:** AUM or assets under management refers to the recent/updated cumulative market value of investments managed by a mutual fund or any investment firm.

**Holdings:** The holdings or the portfolio is a mutual fund's latest or updated reported statement of investments/securities. These are usually displayed in terms of percentage to net assets or the rupee value or both. The objective is to give investors an idea of where their money is being invested by the fund manager.

**Nature of Scheme:** The investment objective and underlying investments determine the nature of the mutual fund scheme. For instance, a mutual fund that aims at generating capital appreciation by investing in stock markets is termed an equity fund or growth fund. Likewise, a mutual fund that aims at capital preservation by investing in debt markets is a debt fund or income fund. Each of these categories may have sub-categories.

**Rating Profile:** Mutual funds invest in securities after evaluating their creditworthiness as disclosed by the ratings. A depiction of the mutual fund in various investments based on their ratings becomes the rating profile of the fund. Typically, this is a feature of debt funds.

**Total Expense Ratio:** Total expenses charged to scheme for the month expressed as a percentage to average monthly net assets.

**Portfolio Turnover Ratio:** Portfolio Turnover Ratio is the percentage of a fund's holdings that have changed in a given year. This ratio measures the fund's trading activity, which is computed by taking the lesser of purchases or sales and dividing by average monthly net assets.

# About Strategy

## HexaShield Tested Investment

Samco's HexaShield Tested Investment is a strategy to put to work money with businesses that can endure and survive in a variety of stressful situations and generate superior long-term risk adjusted returns. It relies on understanding the resilience of companies based on Samco's HexaShield framework tests and evaluates every company and institution on 6 most important facets of risks and stress. These tests are meant to measure every company's ability to maintain enough buffer to stay afloat under adverse economic scenarios. The HexaShield tests are also designed to understand if these companies can generate high cash returns on capital employed in a variety of economic conditions including degrowth, recession, etc. This rigorous scientific and statistical process helps get an understanding of risks, reduces room for bias and beliefs, inculcates discipline and enhances the probability of success.

## 3E Investment Strategy

1. Buy only Efficient HexaShield Tested Companies
2. Buy at an Efficient Price
3. Maintain an Efficient Turnover

## Active Momentum Strategy

Momentum refers to the tendency of winning stocks to continue to perform well and losing stocks to perform poorly in the near future. In Samco Active Momentum Fund the stocks are also selected based on their performance in the past with the idea that they will continue to outperform. The investors are attracted to a company whose price is on an upward trajectory thus opening a new way of buying at high and selling at higher, instead of the traditional idea of buying at low and selling at high, generating higher returns. A mix of methodologies to compute momentum are used which include but are not limited to Risk-adjusted Price Momentum, Momentum Strength Score & Momentum ratio. The fund makes trades based on trading signals generated by the intelligent algorithm. This algorithm has been developed by studying years of market data including price, volume, volatility, open interest, breakouts, relative strengths and correlations with appropriate weights on various data points.

## Transformer Strategy

The principal asset allocation of Samco Dynamic Asset Allocation Fund shall be determined based on momentum in equity markets and extreme mean reversion signals which shall be calculated using SAMCO's proprietary TRANSFORMER model. Fundamentally the strategy will operate based on trend following strategies i.e., when markets are in clear uptrends with lower volatility, equity allocations shall be higher and when markets are breaking down, in correction or bear market phases, net equity allocations shall be zero or at extremely low levels. Only in extremely panic or euphoric conditions, the scheme will move to mean reversion models and build equity exposure in bear markets or cut equity exposure in bull markets. Rebalancing based on the model shall happen on real time dynamic basis and will not follow a monthly/quarterly rebalancing model.

## Disruption Strategy

The SAMCO Special Opportunities Fund focuses on generating long-term capital growth by investing in companies experiencing or poised for special situations. These include circumstances like technological disruption, regulatory changes, management restructuring, or prolonged cyclical challenges. The fund targets companies that are either disruptors, enablers, or adaptors of change, as well as those with significant turnaround potential. It leverages inefficiencies in financial markets where the impact of such special situations may be undervalued or overlooked, aiming to capitalize on the resulting mispricing or unanticipated growth potential. The fund's strategy encompasses a broad spectrum, including digitization, insider mirror trading, spin-offs, reforms, undervalued holding companies, premiumization, sustainable trends, innovation, organized shifts, and new or emerging sectors. This diversified approach seeks to exploit a range of growth opportunities across different sectors and market conditions.

## Tactical Allocation Strategy

To achieve the investment objective, SAMCO Multi Cap Fund follow active investment strategy which employs a unique and balanced investment strategy designed to optimize returns across various market segments. The strategy is built around pre-dominantly allocating 25% each to large caps, mid-caps, small caps, and floating exposure to small caps/foreign securities/debt, ensuring diversified exposure to different market capitalizations. In scenarios such as a bear market, the fund may exercise tactical deviations from its equal weight strategy to safeguard investor capital and optimize returns.

## Rotate Model Strategy

The principal asset allocation of Samco Multi Asset Allocation Fund shall be determined based on trends in equity markets and trends in prices of Gold, Silver based on SAMCO's proprietary ROTATE model. Trends in equity, commodity markets and extreme mean reversion signals which shall be calculated using SAMCO's proprietary ROTATE model. Fundamentally the scheme will operate based on trend following strategies i.e., when markets are in clear uptrends with lower volatility, equity allocations shall be higher and when markets are breaking down, in correction or bear market phases, net equity allocations shall be zero using hedging strategies or at extremely low levels. In such cases, if Gold, Silver as an asset is up trending and exhibiting inverse co-relation to equities, then in such cases, the Fund shall have pre-dominantly higher exposure to Gold, Silver which could go up to 80% of net assets. In cases when both Gold, Silver and Equities are trending down and exhibiting weakness, the Fund will have pre-dominantly higher exposure to debt. Rebalancing based on the model shall happen on real time dynamic basis and will not follow a monthly/quarterly rebalancing model.

## C.A.R.E. momentum strategy

SAMCO Large Cap Fund and SAMCO Large & Mid Cap Fund are built on a cutting-edge momentum-based investment strategy that seeks to harness the power of market trends and corporate performance metrics. At its core, the fund employs SAMCO's proprietary C.A.R.E. momentum system to with an aim to deliver superior risk-adjusted returns by systematically identifying and allocating capital to stocks with strong momentum indicators. The C.A.R.E. system integrates four key dimensions of momentum-Cross Sectional Momentum, Absolute Momentum, Revenue Momentum, and Earnings Momentum. These parameters ensure that the portfolio remains optimized by focusing on stocks that exhibit robust momentum traits. The use of derivatives and hedging further strengthens the strategy by mitigating risks during periods of market volatility.

## From the CIO's desk

October witnessed strong festive demand, reinforcing consumer sentiment and sustaining India's domestic growth momentum. Record retail sales across categories highlighted the economy's consumption strength, while recent GST rate cuts on select consumer durables and packaged goods further supported household spending, particularly in semi-urban and rural areas.

During the earnings season, banks delivered results ahead of expectations, alleviating earlier margin concerns and underscoring sectoral resilience. The IT sector showed mixed trends with mid-tier firms outperforming even as the overall growth outlook remains modest amid AI led disruptions. In the consumer discretionary space, the premiumization trend continued to strengthen, reflecting rising incomes and evolving preferences. Overall, corporate performance remained steady, reaffirming India's robust domestic growth story despite sectoral divergences.

Globally, the U.S. Federal Reserve cut rates by 25 basis points, maintaining a cautious, data-dependent stance as inflation eased to 2.8% and labour markets softened. Chair Powell signalled that further rate cuts will depend on incoming data, balancing mild inflation risks against slowing employment momentum.

On the commodities front, gold and silver prices corrected after recent record highs, though they remained up about 4% for the month. This consolidation reflects profit booking after a strong rally, while underlying stance for precious metals remains wait and watch amid continued macro uncertainty.

In this environment, our investment approach remains anchored in discipline and risk-adjusted decision-making, guided by a bottom up focus on high quality companies with robust balance sheets and sustainable earnings growth. We view market volatility as an opportunity to accumulate strong businesses at attractive valuations.

Our portfolios are strategically positioned with active hedges to manage near-term volatility while staying invested in resilient, long-term performers. We continue to emphasize diversification, dynamic asset allocation, and prudent liquidity management to protect and compound investor wealth over time.

# Samco Active Momentum Fund

(An open-ended equity scheme following momentum theme)

## Investment Objective

The investment objective of the Scheme is to seek to generate long-term capital appreciation by investing in stocks showing strong momentum. Momentum stocks are such that exhibit positive price momentum – based on the phenomenon that stocks which have performed well in the past relative to other stocks (winners) continue to perform well in the future, and stocks that have performed relatively poorly (losers) continue to perform poorly.

However, there can be no assurance or guarantee that the investment objective of the scheme would be achieved.

## Portfolio Classification by Asset & Rating Class as % of net assets

## Market Capitalisation (% of allocation)

## Industry Allocation of Gross Equity Holding (% of Net Assets)

## Disclosure on Active Share

The Active Share was first introduced by Martijn Cremers and Antti Petajisto, both Yale School of Management professors whose concepts were first published in the Review of Financial Studies 2009 paper titled "How active is your Fund Manager"- A New Measure That Predicts Performance.

Active Share measures the fraction of a portfolio (based on position weights) that differs from the benchmark index. The only way that the equity fund manager can outperform a given benchmark is by taking positions that differ from those in the benchmark. Active Share will always fall between 0% and 100%, where 0% will indicate a truly passive index fund and a higher percentage closer to 100% will show true active management with portfolio stocks diverging from the benchmark.

Active

**91.40%**

As on October 31, 2025

**Disclaimer :**

We are voluntarily disclosing the Active Share of Samco Active Momentum Fund in the interest of maintaining high transparency to the investors.

## Disclosure on Active Share

The Active Share was first introduced by Martijn Cremers and Antti Petajisto, both Yale School of Management professors whose concepts were first published in the Review of Financial Studies 2009 paper titled "How active is your Fund Manager"- A New Measure That Predicts Performance.

Active Share measures the fraction of a portfolio (based on position weights) that differs from the benchmark index. The only way that the equity fund manager can outperform a given benchmark is by taking positions that differ from those in the benchmark. Active Share will always fall between 0% and 100%, where 0% will indicate a truly passive index fund and a higher percentage closer to 100% will show true active management with portfolio stocks diverging from the benchmark.

Active

**96.51%**

## Portfolio Classification by Asset & Rating Class as % of net assets

## Market Capitalisation (% of allocation)

## Industry Allocation of Gross Equity Holding (% of Net Assets)

## Disclosure on Active Share

The Active Share was first introduced by Martijn Cremers and Antti Petajisto, both Yale School of Management professors whose concepts were first published in the Review of Financial Studies 2009 paper titled "How active is your Fund Manager"- A New Measure That Predicts Performance.

Active Share measures the fraction of a portfolio (based on position weights) that differs from the benchmark index. The only way that the equity fund manager can outperform a given benchmark is by taking positions that differ from those in the benchmark. Active Share will always fall between 0% and 100%, where 0% will indicate a truly passive index fund and a higher percentage closer to 100% will show true active management with portfolio stocks diverging from the benchmark.

Active

**69.77%**

## Portfolio Classification by Asset & Rating Class as % of net assets

## Market Capitalisation (% of allocation)

## Industry Allocation of Gross Equity Holding (% of Net Assets)

## Disclosure on Active Share

The Active Share was first introduced by Martijn Cremers and Antti Petajisto, both Yale School of Management professors whose concepts were first published in the Review of Financial Studies 2009 paper titled "How active is your Fund Manager"- A New Measure That Predicts Performance.

Active Share measures the fraction of a portfolio (based on position weights) that differs from the benchmark index. The only way that the equity fund manager can outperform a given benchmark is by taking positions that differ from those in the benchmark. Active Share will always fall between 0% and 100%, where 0% will indicate a truly passive index fund and a higher percentage closer to 100% will show true active management with portfolio stocks diverging from the benchmark.

Active

**84.26%**

As on October 31, 2025

### Disclaimer :

We are voluntarily disclosing the Active Share of Samco Multi Cap Fund in the interest of maintaining high transparency to the investors.

Please refer to our website [www.samcomf.com/active-share/samco-multi-cap-fund](http://www.samcomf.com/active-share/samco-multi-cap-fund) to view how to calculate active share.

The information on Active Share should not be construed as a forecast or promise of returns or safeguard of capital. The Investors who must make their own investment decisions, based on their own investment objectives, financial positions and needs of specific investor.

# Samco Dynamic Asset Allocation Fund

(An open ended dynamic asset allocation fund)

## Investment Objective

The investment objective of the Scheme is to generate income/long-term capital appreciation by investing in equity, equity derivatives, fixed income instruments and foreign securities. The allocation between equity instruments and fixed income will be managed dynamically so as to provide investors with long term capital appreciation while managing downside risk.

However, there can be no assurance or guarantee that the investment objective of the scheme would be achieved

## Portfolio Classification by Asset & Rating Class as % of net assets

## Market Capitalisation (% of allocation)

## Industry Allocation of Gross Equity Holding (% of Net Assets)

## Disclosure on Active Share

The Active Share was first introduced by Martijn Cremers and Antti Petajisto, both Yale School of Management professors whose concepts were first published in the Review of Financial Studies 2009 paper titled "How active is your Fund Manager"- A New Measure That Predicts Performance.

Active Share measures the fraction of a portfolio (based on position weights) that differs from the benchmark index. The only way that the equity fund manager can outperform a given benchmark is by taking positions that differ from those in the benchmark. Active Share will always fall between 0% and 100%, where 0% will indicate a truly passive index fund and a higher percentage closer to 100% will show true active management with portfolio stocks diverging from the benchmark.

Active

**76.67%**

As on October 31, 2025

### Disclaimer :

We are voluntarily disclosing the Active Share of Samco Dynamic Asset Allocation Fund in the interest of maintaining high transparency to the investors.

Please refer to our website [www.samcomf.com/active-share/samco-dynamic-asset-allocation-fund](http://www.samcomf.com/active-share/samco-dynamic-asset-allocation-fund) to view how to calculate active share.

# Samco Special Opportunities Fund

(An open-ended equity scheme following special situations theme)

## Investment Objective

The investment objective of the scheme is to achieve long-term capital appreciation by investing in a portfolio of securities that are involved in special situations such as restructurings, turnarounds, spin-offs, mergers & acquisitions, new trends, new & emerging sectors, digitization, premiumization, and other special corporate actions. These situations often create mispricings and undervalued opportunities that the fund aims to exploit for potential capital appreciation.

However, there can be no assurance or guarantee that the investment objective of the scheme would be achieved.

## Market Capitalisation (% of allocation)

## Industry Allocation of Gross Equity Holding (% of Net Assets)

## Disclosure on Active Share

The Active Share was first introduced by Martijn Cremers and Antti Petajisto, both Yale School of Management professors whose concepts were first published in the Review of Financial Studies 2009 paper titled "How active is your Fund Manager"- A New Measure That Predicts Performance.

Active Share measures the fraction of a portfolio (based on position weights) that differs from the benchmark index. The only way that the equity fund manager can outperform a given benchmark is by taking positions that differ from those in the benchmark. Active Share will always fall between 0% and 100%, where 0% will indicate a truly passive index fund and a higher percentage closer to 100% will show true active management with portfolio stocks diverging from the benchmark.

Active

**92.84%**

As on October 31, 2025

## Disclosure on Active Share

The Active Share was first introduced by Martijn Cremers and Antti Petajisto, both Yale School of Management professors whose concepts were first published in the Review of Financial Studies 2009 paper titled "How active is your Fund Manager"- A New Measure That Predicts Performance.

Active Share measures the fraction of a portfolio (based on position weights) that differs from the benchmark index. The only way that the equity fund manager can outperform a given benchmark is by taking positions that differ from those in the benchmark. Active Share will always fall between 0% and 100%, where 0% will indicate a truly passive index fund and a higher percentage closer to 100% will show true active management with portfolio stocks diverging from the benchmark.

Active

**82.29%**

As on October 31, 2025

### Disclaimer :

We are voluntarily disclosing the Active Share of Samco Large & Mid Cap Fund in the interest of maintaining high transparency to the investors.

Please refer to our website [www.samcomf.com/active-share/samco-large-and-mid-cap-fund](http://www.samcomf.com/active-share/samco-large-and-mid-cap-fund) to view how to calculate active share.

## Industry Allocation of Gross Equity Holding (% of Net Assets)

## Disclosure on Active Share

The Active Share was first introduced by Martijn Cremers and Antti Petajisto, both Yale School of Management professors whose concepts were first published in the Review of Financial Studies 2009 paper titled "How active is your Fund Manager"- A New Measure That Predicts Performance.

Active Share measures the fraction of a portfolio (based on position weights) that differs from the benchmark index. The only way that the equity fund manager can outperform a given benchmark is by taking positions that differ from those in the benchmark. Active Share will always fall between 0% and 100%, where 0% will indicate a truly passive index fund and a higher percentage closer to 100% will show true active management with portfolio stocks diverging from the benchmark.

Active

**70.74%**

As on October 31, 2025

## Market Capitalisation (% of allocation)

## Industry Allocation of Gross Equity Holding (% of Net Assets)

## Disclosure on Active Share

The Active Share was first introduced by Martijn Cremers and Antti Petajisto, both Yale School of Management professors whose concepts were first published in the Review of Financial Studies 2009 paper titled "How active is your Fund Manager"- A New Measure That Predicts Performance.

Active Share measures the fraction of a portfolio (based on position weights) that differs from the benchmark index. The only way that the equity fund manager can outperform a given benchmark is by taking positions that differ from those in the benchmark. Active Share will always fall between 0% and 100%, where 0% will indicate a truly passive index fund and a higher percentage closer to 100% will show true active management with portfolio stocks diverging from the benchmark.

# Samco Overnight Fund

(An open-ended debt scheme investing in overnight securities. A relatively low interest rate risk and relatively low credit risk)

## Investment Objective

The investment objective of the Scheme is to provide reasonable returns commensurate with very low risk and providing a high level of liquidity, through investments made primarily in overnight securities having maturity/ residual maturity of 1 day. However, there can be no assurance or guarantee that the investment objective of the scheme would be achieved.

## Scheme Details
